Recent years have seen transition in food consuming habits of the population around the world. People are now becoming concern about the type of food they are consuming along with monitoring calorie and other vital nutrients. Starch is a high-calorie food product. Furthermore, essential nutrients such as protein, fat, vitamins, and minerals are missing from starches. In addition, starch breaks down into glucose, which is expected to increase sugar levels. A study by the Princeton University revealed that laboratory rats that consumed High-fructose corn syrup (HFCS) gained substantially more weight than rats fed table sugar. Such negative health effects of starch and its derivatives negatively impact the overall market expansion.
