Brooks Healing Center, a leading addiction treatment & mental health facility in Normandy, Tennessee, is proud to announce its offering of Brainspotting Therapy

NORMANDY, TN, UNITED STATES,
November 20, 2024 /

EINPresswire.com/ -- [Brooks Healing Center](#), a leading addiction treatment and mental health facility in Normandy, Tennessee, is proud to announce its offering of Brainspotting Therapy. This innovative, brain-based therapeutic approach is now available to support individuals grappling with trauma, anxiety, addiction, and other mental health challenges. Brooks Healing Center's trained and certified therapists offer specialized Brainspotting sessions to help clients address deeply rooted traumas and move forward in their healing journeys.

Brainspotting, developed by Dr. David Grand in 2003, has been gaining recognition as a revolutionary tool in trauma and mental health therapy. Unlike traditional therapies that often require revisiting traumatic memories, Brainspotting leverages specific points in the visual field to activate and release emotional distress held within the subcortical brain, where memories and emotions are stored. This unique technique provides clients with a powerful yet gentle method for achieving healing and relief.

"Our goal is to offer a diverse range of therapeutic approaches that allow clients to find what

best suits their needs,” said a representative from Brooks Healing Center. “Brainspotting is particularly valuable for those who have struggled to find relief through other therapies, as it allows for deep emotional processing with minimal verbal recall, making it less overwhelming for many clients.”

How Brainspotting Works

A Brainspotting session at Brooks Healing Center is a guided, mindful experience:

Preparation: The session begins with calming breathing exercises and bilateral music, which promotes relaxation and prepares clients for the process.

Locating Discomfort: The therapist helps the client identify a specific point in the body where they feel discomfort or distress and ranks it on a scale for guidance.

Finding the “Brainspot”: Using either the “Outside Window” or “Inside Window” approach, the therapist assists the client in locating their “brainspot”—the visual point where distress peaks.

This point, the “brainspot,” serves as a gateway to accessing and processing the emotions and memories tied to their trauma, helping to clear the distress in a safe and controlled manner.

Benefits and Effectiveness of Brainspotting

Brainspotting has demonstrated positive outcomes for a wide range of issues, particularly for those facing:

Anxiety and attachment issues

Chronic pain
PTSD
Substance use and addiction
Depression

Early studies indicate that Brainspotting may even be more effective than traditional therapies like EMDR and Cognitive Behavioral Therapy (CBT), with participants continuing to improve long after treatment. For individuals struggling with addiction, anxiety, or depression, Brainspotting offers a transformative tool for lasting relief and self-discovery.
