

Asia-Pacific Building Information Modeling Market Share, Trends, Size, Major Players And Forecast To 2033

Depending on component, the solution segment accounted for the largest Asia-Pacific Building Information Modeling market share in 2023.

WILMINGTON, NEW CASTLE, DE, UNITED STATES, November 25, 2024 /EINPresswire.com/ -- The [Asia-Pacific Building Information Modeling Market](#) was valued at \$1979.34 million in 2023, and is projected to reach \$9207.17 million by 2033, registering a CAGR of 16.1% from 2024 to 2033. The Asia-Pacific region is witnessing a dynamic shift in the construction industry driven by rise in adoption of building information modeling (BIM). Government mandates for BIM usage and the escalating demand for digital transformation are key trends providing lucrative opportunities for the growth of the market. BIM enhances project efficiency and collaboration as well as integrates with emerging technologies such as virtual reality (VR) and augmented reality (AR), opening new avenues for innovation. However, the high initial investment required for BIM implementation poses a significant restraint, particularly for smaller firms. Furthermore, the expansion of BIM applications across construction lifecycle stages and integration with smart city initiatives created the demand for the BIM technology in Asia-Pacific.

By end user, the architects/engineer segment dominated the Asia-Pacific building information modeling market in 2023. This is attributed to rise in demand for BIM technology and usage of BIM solution by engineers and architects to produce buildings in the construction sector, drive the growth of the segment. By deployment mode, the on-premise segment is expected to grow during the forecast period, as organizations have complete control over their on-premise database.

Global Market Insights (GMI) has published a new report on the Asia-Pacific Building Information Modeling (BIM) market.

The report, titled "Asia-Pacific Building Information Modeling (BIM) Market: Growth and Opportunities", provides a comprehensive analysis of the market's current state and future prospects. It covers key market drivers, challenges, and opportunities, as well as a detailed breakdown of market segments and regional performance.

By component, the solution segment dominated the Asia-Pacific building information modeling market in 2023. This is attributed to the various features provided by the BIM software such as 3D visualization of buildings, reduced costs and time, and flexible design changing of construction models. However, the service segment is expected to grow during the forecast period, owing to increase in growth of third-party software service providers in the region.

Depending on component, the solution segment

accounted for the largest Asia-Pacific Building Information Modeling market share in 2023.

Based on deployment, the on-premise segment accounted for the largest Asia-Pacific Building Information Modeling market share in 2023.

Depending on application, the planning and modelling segment accounted for the largest Asia-Pacific Building Information Modeling market share in 2023.

Country-wise, China dominated the market share in 2023.

Factors such as rise in government mandates for BIM adoption and integration of BIM with emerging technologies such as VR and AR are expected to drive the [Asia-Pacific building information modeling market growth](#) during the forecast period. In addition, growing demand for digital transformation in construction and improving project efficiency and collaboration with BIM technology, propel the growth of the Asia-Pacific building information modeling market.
