[What Is The Projected Growth Of The Insulating Glass Window Market By 2028?](#)

The insulating glass window market is predicted to continue its rapid growth trajectory, reaching a lofty \$18.36 billion by 2028, matching the CAGR of 6.5% observed in previous years. This upward trend in the forecast period

can be pinned down to an array of factors like a surge in building refurbishment and upgrades, a growing focus on health and wellness, and regulatory changes. Other prominent aspects include an aging building stock, rising demand for daylighting, and major trends like triple glazing, smart glass integration, vacuum insulated glass VIG, solar control films, and the integration of unique security features.

Why Is The Demand For Energy-Efficient Buildings Driving The Growth Of The Insulating Glass Window Market?

Increasing demand for energy-efficient buildings is a significant player propelling the growth of the insulating glass window market over the coming years. Such buildings require less energy for heating and cooling, thanks to insulating glass windows that act as barriers, preventing heat from escaping or entering a home or office. The rise of this trend was highlighted when more than 6,000 buildings received Environmental Protection Agency EPA ENERGY STAR certification in April 2021, and around 280,000 commercial properties utilized the EPA ENERGY STAR Portfolio Manager tool for gauging energy use, water use, and/or waste and materials. No wonder, the insulating glass window market is bracing for a robust growth phase.
