Qbic and Door Tablet Unveil the EPS: A Green Solution for Enhanced Workspace Efficiency

NEW TAIPEI CITY, TAIWAN, November 28, 2024 /EINPresswire.com/ -- Qbic Technology, a leading space management solutions provider and UK-based workspace specialist Door Tablet, today announced the Door Tablet EPS, revolutionizing workspace management by eliminating the two biggest barriers to digital transformation: infrastructure complexity and operating costs.

According to a sustainability report published by LG, conventional digital displays account for 83% of carbon emissions during their operational lifetime. The Door Tablet EPS directly addresses this challenge by replacing power-hungry displays with

Qbic Technology and UK-based workspace specialist Door Tablet, co-launches the Door Tablet EPS.

breakthrough ePaper technology, delivering immediate cost savings while significantly reducing environmental impact.

"We're seeing a fundamental shift in how organizations approach workplace technology – they are no longer willing to choose between functionality and environmental responsibility," said Primo Shao, CEO of Qbic Technology. "By combining Qbic's hardware expertise with Door Tablet's software innovation, organizations can benefit from an ePaper solution that eliminates this trade-off, delivering both efficient workspace management and measurable sustainability benefits."

Smart Space Management, Reimagined

Modern offices face three critical challenges: reducing energy waste, improving space utilization, and creating a more comfortable and sustainable work environment. The Door Tablet EPS ecosystem, comprised of the Door Tablet EP7 for meeting room bookings and personal displays,

EP4 for desk booking, and the EPS controller powered by the ABX2, addresses all these needs while delivering measurable sustainability benefits.

In today's workplace, where digital eye strain impacts productivity and well-being, Door Tablet's 7-inch and 4-inch ePaper devices offer a welcome relief. Their paper-like appearance is as gentle on the eyes as reading a printed page, while the intuitive black-and-white interface with red "ink" to signal availability ensures clear visibility from any angle. This thoughtful design supports better workplace wellness and reduces carbon footprint without compromising functionality.

Facility managers and IT teams can finally say goodbye to complex installations and ongoing maintenance headaches. The EP7 and EP4's battery-powered, cable-free design allows for hassle-free deployment anywhere in your workspace, while the EPS controller system handles all the technical complexity behind the scenes. The Door Tablet EPS deployment bundle makes rolling out an EPS system easy and efficient. This means seamless transformation of office spaces overnight without disrupting existing infrastructure, significantly reducing deployment time and total costs of ownership.

"Today's workplace needs more than just technology – it needs solutions that solve real problems," said Avi Tchiprout, CTO of Door Tablet. "Our partnership with Qbic demonstrates how we're helping organizations create more efficient, sustainable, and employee-friendly workspaces while meeting their environmental goals."
