The IPTV Market report provides an extensive analysis of changing market dynamics, major segments, value chain, competitive scenario, and regional landscape. This research offers a valuable guidance to leading players, investors, shareholders, and startups in devising strategies for the sustainable growth and gaining competitive edge in the market.

The Internet-based Protocol Television (IPTV) refers to the process of transmitting television programs and videos through the internet. The video servers transmit signals through rooftop antenna, satellite dish and fiber optic cables to stream content at various locations. The IPTV market primarily uses IP multicasting with Internet Group Management Protocol (IGMP), Real-Time Streaming Protocol (RTSP), Real-Time Messaging Protocol (RTMP) and Hypertext Transfer Protocol (HTTP) for live broadcasts and on-demand programs. In comparison to the public

internet, it provides the network operators with more control over the video traffic and enables regular quality-checks of the service. It also allows the viewers to create a custom list of channels and record shows in high-definition (HD) quality.

Furthermore, growing preference for video-on-demand and high-definition channels and increase in demand for alternative investment boost the [growth of the global internet protocol television \(IPTV\) market](#). In addition, increase in use of digital transformation technology and growing popularity of mobile devices positively impact the growth of the market. However, the Stringent regulatory norms and lack of awareness and high infrastructure cost hampers the internet protocol television market growth. On the contrary, the rise in adoption of 5G technology is expected to offer remunerative opportunities for expansion during the IPTV market forecast.

Based on application, the non-linear TV segment accounted for the highest share in 2021, contributing to nearly two-thirds of the global internet protocol television market, and is expected to maintain its lead in terms of revenue during the forecast period. However, the linear TV segment is expected to manifest the highest CAGR of 11.0% from 2022 to 2031.

IPTV providers are offering triple-play services, which allow users to experience broadband, telephone, and TV services on a single line. These IPTV providers are also offering mobility to the customers along with triple-play services, to increase the [market growth of IPTV](#) as against satellite TV and cable TV. This, in turn, allows the customers to utilize IPTV services for a multi-viewing experience. Furthermore, Twitter and Facebook apps read a viewer's incoming tweets or status updates and present these on the TV screen along with television programming and commercials. For instance, in July 2020, Orange Romania, a subsidiary of Orange SA, introduced the TV Go box. Therefore, the advertisers are carefully aiming to exploit these services being offered by the IPTV providers, which, in turn, is expected to provide lucrative opportunity for the growth of the global market.

Based on industry vertical, the media and entertainment segment accounted for the highest share in 2021, holding nearly two-fifths of the global internet protocol television market, and is expected to continue its leadership status during the forecast period. However, the IT & Telecom segment is estimated to grow at the highest CAGR of 11.6% during the forecast period.
