Prime determinants of growth

The global [household](#) cleaners market is experiencing growth due to factors such as rise in demand for household cleaners, increase in the number of households, and the requirement of cleaning products in households to maintain a clean and healthy environment. On the other hand, Oil-based degreasers are harmful to the groundwater as these are toxic chemicals and sometimes can contribute to the formation of smog. Therefore, a rise in awareness regarding environmental concerns and global warming issues among consumers is expected to hinder the growth of the market. Nevertheless, an increase in demand for organic cleaners is expected to create lucrative opportunities for new entrants in the upcoming years.

The surface cleaner segment to maintain its leadership status throughout the forecast period

By type, the surface cleaner segment held the highest market share in 2021, accounting for nearly one-third of the global household cleaners market, and is estimated to maintain its

leadership status throughout the forecast period. With growing awareness of the importance of cleanliness and hygiene, consumers are increasingly seeking effective cleaning products that can keep homes and workplaces clean and germ-free. The recent COVID-19 pandemic has heightened consumers' concerns about the spread of infectious diseases. However, the glass cleaner segment is projected to portray the fastest CAGR of 5.4% from 2022 to 2031. .

The floor cleaners segment to retain its dominance by 2031

By application, the floor cleaners segment held the major share in 2021, generating more than two-fifths of the global household cleaners market, and is estimated to maintain its leadership status throughout the forecast period. The extensive demand for wood and tile floor cleaners among households is a primary factor boosting the sales of household floor cleaners. With the increase in number of households, the demand for household cleaners is rising simultaneously in developing as well as developed countries. The fabric care segment, on the other hand would portarya the fastest CAGR of 5.2% from 2022 to 2031.

An offline segment to maintain its leadership status throughout the forecast period

By distribution channel, the offline segment accounted for more than four-fifths of the global household cleaners market revenue in 2021 and is projected to rule the roost by 2031. Hypermarkets & supermarkets, specialty stores, convenience stores, and other small retail stores all fall within the offline section. Manufacturers consistently work to improve their products' shelf visibility; as a result, they focus mostly on offline sales. As a result, a larger selection of household products, including household cleaning products, is offered offline. On the contrary, the online segment would display the fastest CAGR of 5.6% during the forecast period.

Asia-Pacific to maintain its dominance by 2031

Based on region, Asia-Pacific held the highest market share in terms of revenue in 2021, accounting for nearly two-fifths of the global household cleaners market, and is estimated to maintain its leadership status throughout the forecast period. Asia-Pacific is expected to grow at the fastest rate in the forthcoming years. The region serves as a lucrative market for household cleaners owing to an increase in awareness about the importance of maintaining a clean and hygienic home environment. Moreover, the region is characterized by emerging economies such as India and China with a high population base, which makes it a potential market for household cleaners. On the other hand, LAMEA region, is estimated to portray the highest CAGR of 5.1% from 2022 to 2031.
