SWiM GDS Provides Better Facilities Utilisation for Container Shipping
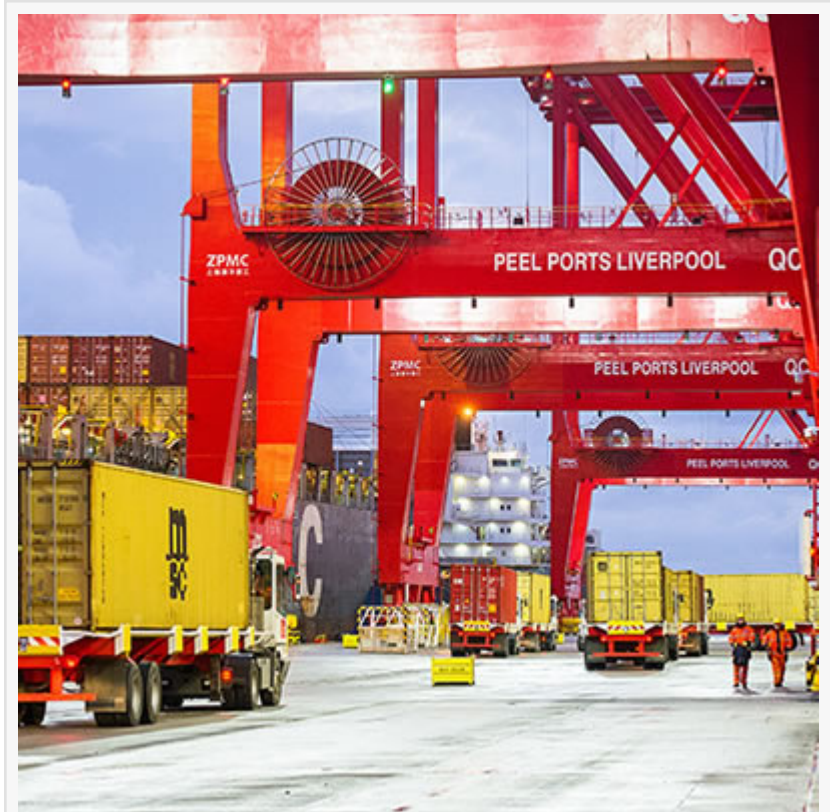

LONDON, UNITED KINGDOM, February 3, 2025 /EINPresswire.com/ -- SWiM GDS, a leading provider of innovative solutions for the shipping industry, has announced the launch of their latest software, aimed at improving facilities utilisation for container shipping. This new software is set to revolutionize the way shipping companies plan and manage their operations, resulting in increased efficiency and cost savings.

The SWiM GDS software offers a range of features that will greatly benefit container shipping companies. One of the key features is the ability to improve empty container fleet planning and utilisation. This means that shipping companies can now better manage their empty containers, reducing the number of idle containers

and maximizing their use. This will result in significant cost savings for shipping companies, as well as reducing their environmental impact.

Another important feature of the SWiM GDS software is its ability to maximise vessel capacity planning and utilisation. By accurately predicting vessel capacity and optimizing loading plans, shipping companies can now make the most of their vessels' space, resulting in increased revenue and reduced costs. This feature also helps to reduce the number of empty containers being transported, further contributing to cost savings and environmental sustainability.

In addition to improving container and vessel utilisation, the SWiM GDS software also facilitates port call planning and vessel turnaround times. With real-time data and advanced algorithms, shipping companies can now plan their port calls more efficiently, reducing waiting times and improving vessel turnaround times. This will not only save time and money but also improve the

overall customer experience.

SWiM GDS is committed to providing innovative solutions that help shipping companies operate more efficiently and sustainably. With their latest software, they aim to reduce sales overheads, administrative, and advertising costs for shipping companies, resulting in increased profitability. This new software is a game-changer for the shipping industry and is set to make a significant impact on the way container shipping is managed.
