

# Food and Beverages Disinfection Market to generate \$2,387.9 million by 2025, growing at a CAGR of 4.4%

WILMINGTON, DE, UNITED STATES,  
December 11, 2024 /

EINPresswire.com/ -- The [global food and beverages disinfection market size](#)

is estimated to reach \$2,387.9 million by 2025 growing at a CAGR of 4.4% through the forecast period. The chemical based disinfection products segment led the food and beverages disinfection market in 2017, followed by UV disinfection equipment. The significant growth in this segment is attributed to increased penetration of packaged food products in retail food industry, growth in awareness toward food borne diseases, and introduction of regulatory imposition from government organizations.

The penetration of UV-based disinfection equipment among centralized food and beverage facilities would fuel food and beverages disinfection market growth during the forecast period. The centralized approach for food processing especially for packaged food products has significantly increased the turnaround for food and beverage packaging. The food contact disinfection activity requires longer duration for sanitation, which eventually increases the overall time required for food and beverage processing. In addition, the manufacturers are facing challenges in terms of chemical disinfectant supply, which has created the need for an effective alternative for conventional chemical based disinfectants.

Chlorine compounds are one of the most convenient chemical disinfectants used by food processing companies due to its economic pricing and easy availability. Hence, the above factors attribute toward the growth in chlorine compound segment in food and beverages disinfection market forecast. Increase in number of patient population suffering from food and water borne

diseases has increased the financial burden on healthcare service providers in Asia and Africa. According to WHO, Diarrhoeal diseases contribute 50% of the food borne illnesses with total incidence of 550 million globally per year. The annual mortality rate of diarrhoeal diseases is around 230,000 per year.

The global food and beverages disinfection market is segmented based on product type Chlorine compounds, Hydrogen Peroxide and Peroxyacid (PAA), Carboxylic acid, Ultra Violet Systems and Ozone Oxidation System. Based on end user, the food and beverages disinfection market is categorized into food processing companies, beverage processing companies, catering kitchens and retail distributors. Furthermore, the report includes the revenue generated from the sales of food and beverages disinfection products across North America, Europe, Asia-Pacific, and LAMEA.
