Atopic Dermatitis Marketed Therapies

- RINVOQ (upadacitinib): AbbVie
Upadacitinib (ABT-494) – discovered and developed by AbbVie scientists and marketed as RINVOQ – is a selective and reversible JAK inhibitor. JAKs are intracellular enzymes that transmit signals arising from cytokine or growth factor-receptor interactions on the cellular membrane to influence cellular processes of hematopoiesis and immune cell function. Within the signaling pathway, JAKs phosphorylate and activate signal transducers and activators of transcription (STATs), which modulate intracellular activity, including gene expression. Upadacitinib modulates the signaling pathway at the point of JAKs, preventing the phosphorylation and activation of STATs.
- DUPIXENT (dupilumab): Sanofi/Regeneron Pharmaceuticals
DUPIXENT (dupilumab) is an interleukin-4 (IL-4) receptor alpha antagonist. It is a human monoclonal antibody of the immunoglobulin G4 subclass that inhibits IL-4 and interleukin-13 (IL-13) signaling by specifically binding to the IL-4 receptor alpha subunit, which the IL-4 and IL-13 receptor complexes share. Dupilumab inhibits IL-4 signaling via the type 1 receptor and both IL-4 and IL-13 signaling via the type 2 receptor.

Atopic Dermatitis Emerging Therapies

- Rocatinlimab (KHK4083/AMG 451): Amgen/Kyowa Kirin

Rocatinlimab (KHK4083/AMG 451) is an anti-OX40 human monoclonal antibody that inhibits and reduces the number of OX40-expressing pathogenic T cells responsible for driving systemic and local inflammatory responses. It has been reported that effector T cells expressing OX40 are present in the lesions of patients with atopic dermatitis and are critical in the disease pathophysiology. The initial antibody was discovered in collaboration between Kyowa Kirin US Research and La Jolla Institute for Immunology.

- VTAMA (tapinarof; JTE-061): Dermavant Sciences/Japan Tobacco Pharmaceutical/Torii Pharmaceutical

Tapinarof is a novel aryl hydrocarbon receptor agonist in development as a once-daily, steroid-free, and cosmetically elegant topical cream. Dermavant is developing it for the treatment of psoriasis and atopic dermatitis. Over 1,400 subjects have participated in 12 clinical trials for tapinarof. In the US, VTAMA cream is approved for the topical treatment of plaque psoriasis in adults.

Atopic Dermatitis Market Outlook

Several effective Atopic Dermatitis treatments have become available in recent years for adult and adolescent patients with Atopic Dermatitis, and more are in development. The current Atopic Dermatitis market uses several off-label therapies apart from pharmacological systemic treatment. Localized atopic itch is frequently treated with topical or intralesional therapeutic agents. Topical corticosteroids have been used for atopic dermatitis for decades. Pimecrolimus and tacrolimus, topical calcineurin inhibitors, are used as steroid-sparing agents for patients with atopic dermatitis. Phosphodiesterase-4 (PDE-4) inhibitors are an alternative option for the topical treatment of pruritus in atopic dermatitis. Oral antihistamines are commonly used for atopic itch. Additionally, phototherapy is efficacious in targeting atopic itch.
