

# Medical Device Connectivity Market to Reach USD 16.21 Billion by 2032, Growing at an Exceptional CAGR of 22.68%

*Revolutionizing Patient Care with Seamless Connectivity and Real-Time Data Integration to Meet the Rising Demand for Remote Monitoring Solutions.*

AUSTIN, TX, UNITED STATES, December 18, 2024 /EINPresswire.com/ -- The [Medical Device Connectivity market](#) size was estimated at USD 2.45 billion in 2023 and is expected to reach USD 16.21 billion by 2032 at a CAGR of 22.68% during the forecast period of 2024-2032.

Medical Device Connectivity Market Poised for Exponential Growth, Transforming Patient Care through Seamless Connectivity and Real-Time Data Integration

The Medical Device Connectivity Market is experiencing phenomenal growth due to the rising demand for seamless integration of data, improved clinical workflow, and higher patient care. Connectivity solutions allow the automatic transfer of data between medical devices and healthcare information systems, making it much less prone to error and helping in better decision-making processes. The industry is further accelerated by innovative technologies including IoT-enabled devices, wireless technologies, and interoperability solutions. The growth factors for this market include an increasing number of chronic diseases, an aging global population, and the adoption of remote patient monitoring systems. Healthcare providers are focusing on real-time monitoring and data-driven decisions to improve patient outcomes, operational efficiency, and cost-effective care. Regulatory initiatives toward data standardization and compliance further enhance the adoption of medical device connectivity, thus becoming a part of the new healthcare infrastructure.

## Market Analysis: Rising Demand for Remote Patient Monitoring and Real-Time Data Integration

Growth in the Medical Device Connectivity Market is the growing adoption of remote patient monitoring systems. The worldwide burden of chronic diseases and an aging population are driving healthcare providers to adopt connected devices that exchange real-time data and improve patient management. More than 88% of healthcare providers are focusing on remote monitoring solutions to improve the outcomes of chronic patients. Data across the continuum of care drove this trend and the emergence of IoT-enabled devices, from ventilators to infusion pumps and wearable monitors, is only pushing it forward. And projections show that the number of connected medical devices will be 50 billion by 2030. Interoperability standards such as HL7 and FHIR ensure smooth communication between devices and healthcare systems, which drives clinical efficiency. These solutions are increasingly used by hospitals to reduce error, enhance operation, and deliver efficient and effective patient-centered cost-effective care.

### Key Medical Device Connectivity Market Players:

GE Healthcare Ltd.

Cisco Systems Inc.

Digi International Inc.

Honeywell HomeMed LLC

Philips Healthcare

Cardiopulmonary Corporation

Qualcomm Inc.

eDevice Inc.

Siemens Healthcare

### Segment Analysis

#### By Product & Services:

The medical device connectivity solutions segment dominated the largest market share, primarily driven by the increasing adoption of interoperability solutions in healthcare facilities, the shift of point-of-care diagnostics from hospitals to home care settings, and the growing demand for integrated healthcare systems to enhance healthcare quality and patient outcomes.

#### By Application

In 2023, the vital signs & patient monitors segment dominated the market and accounted for the largest Medical Device Connectivity Market share. That is due to the rising usage of this kind of monitor for continuous monitoring of patients, including as more chronic illnesses increase due to older populations. They are ubiquitous in emergency, critical, and operating room settings, further solidifying their position as essential actors in the healthcare system.

#### By End Users

In 2023, hospitals and surgical centers dominated the market with the largest market share. This is owed to the large number of patients they treat and their considerable financial capacity to invest in cutting-edge connectivity solutions. Because of lower hospital profitability, greater emphasis on quality patient care & safety is driving the demand for connectivity solutions in such settings.

## Key Market Segments

### By Product and Services

- Medical Device Connectivity Solutions
- Implementation and Integration services
- Support & maintenance services
- Training services
- Consulting services

### By Technology

- Wired technologies
- Wireless technologies
- Hybrid technologies

### By Application

- Vital signs & patient monitors
- Anesthesia machines & Ventilators
- Infusion pumps

### By End User

- Hospitals
- Home Care Centers
- Diagnostic & Imaging Centers
- Ambulatory Care Centers

## Regional Development: North America Leads the Way

North America, dominated the market with the largest share in the Medical Device Connectivity Market, in 2023. North America possesses the highest market share due to the increasing predominance of collaborations among creators of healthcare, immense use of the connection of clinical devices, and effective alteration solutions to solve the growing cost of healthcare. Others, from up governmental and non-governmental, including HIPAA, FCC, and CMS. This means pervasive connectivity solutions within healthcare facilities. This makes the data secure, standardized, and compliant, which further drives adoption.

Asia Pacific is projected to grow at the fastest rate throughout the forecast period. The growth in the Asia Pacific has been credited to other factors, such as significant investments in healthcare infrastructure, increased awareness of connected healthcare technology, and the increased adoption of modernized medical devices in developing countries, specifically, China and India. Partnerships within the region also support further development of medical device connectivity solutions.

### Recent Developments

- Philips Expands Interoperability Capabilities

In October 2023, Philips announced the introduction of new interoperability features that enhance patient monitoring and care coordination. The integration of the Philips Capsule Medical Device Information Platform (MDIP) with Philips Patient Information Center iX (PIC iX) offers a unified patient overview.

- Nova Scotia Collaborates with Oracle Cerner for Integrated Care Records

In February 2023, the province of Nova Scotia, in partnership with the Nova Scotia Health Authority (NSHA) and IWK Health, entered a 10-year agreement with Oracle Cerner to implement an integrated electronic care record system.
