Scallops are marine bivalve mollusks. There are numerous scallop species, and each prefers a different type of habitat. Some species live in shallow waters between the low tide line and 100 meters deep. Other species can only be found in deep waters. All of these species are only found in salt water and cannot survive in fresh or brackish water. Scallops of various species can be found all over the world. The Indo-Pacific region has the most species diversity, however, scallops can be found in oceans across the globe.

Rise in awareness about the health benefits of seafood has rapidly increased the consumption rate, and is often viewed as a healthier option, as it acts as a rich protein source. In addition, the benefits of seafood consumption involve a reduction in risk for cardiovascular diseases, osteoporosis, obesity, diabetes, arthritis, high blood pressure, and cancer. Moreover, seafood is a rich source of essential micro & macronutrients, thereby increasing the consumption of seafood among health-conscious individuals.
