

# Asia E-Learning Market is projected to reach \$162,158 million by 2030

*Country wise, the Asia E-learning industry was dominated by China. However, India is expected to witness significant growth in the upcoming years.*

WILMINGTON, NEW CASTLE, DE, UNITED STATES, January 3, 2025 /EINPresswire.com/ -- The [Asia E-learning Market](#) size was valued at \$38,257 million in 2020, and is estimated to reach a value of \$162,158 million by 2030, registering a CAGR of 15.7% from 2021 to 2030. Employee training is the most frequent type of e-learning for which organizations use LMS. Organizations utilize employee training for numerous reasons, such as onboarding new hires and improving employee performance. Training employees using an LMS formalizes training delivery and makes it more efficient. Compared to traditional training, e-learning more effectively encourages professional development by promoting knowledge and e-learning culture, thereby creating a positive scope for Asia E-learning market growth.

This makes it easy for users to learn anytime, anywhere, with few, if any, restrictions. Basically, e-learning is training, learning, or education delivered online through a computer or any other digital device.

The service segment also plays a significant role in the market, owing to its rapid usage in technology integration, blended learning, and course setup. Traditional training can be expensive and often complex to maintain. E-learning removes the need for costly printed training materials and even on-site instructors. If modules within the content needs to change, it can be done easily through LMS without having to print and distribute updated training materials.

In 2020, the Asia e-learning market share was dominated by the content segment, and is expected to maintain its dominance in upcoming years as developments in technology such as deployment of web and cloud-based platforms increased adoption of e-learning methods, owing to its ease of operation and lower cost, which propels the market growth. In addition, e-learning

allows learners to quickly and more easily complete their training, resulting in improved performance and greater productivity. Learners appreciate that they can participate in training at their convenience.

COVID-19 pandemic has transformed working model of the educational sector by focusing more on online working models that has created a lucrative scope for the [Asia e-learning market trends](#). After the outbreak of the pandemic, China was the first country to adopt online education courses and teaching methodologies, creating a higher investment scenario within the market. China's education venture capital flow reached \$19.8 billion in 2020, more than double the \$9.5 billion since 2010. China benefits from having 283 million students from pre-kindergarten to higher education, which is further estimated to have a positive scope for the overall market.
