Based on type, the ATM segment dominated the global self services technologies market share in 2020, and is expected to continue this trend throughout the self services technologies market forecast period. This is because, ATMs have emerged as multifunctional machines in the recent years, offering customers with services, such as cash deposit, bill payments, and account statements, which was only limited to cash dispense in past. This additional service has benefited banks and financial institutions in their efforts to improve revenue margin, save operating time, and provide comfort to customers. This is widely adopted as the key strategy by major players in the ATM market to focus on expanding their geographical presence.

Self Service Technologies Market

Post COVID-19, the global self services technologies market was valued at \$32.23 billion in 2020, and is projected to reach \$88.33 billion by 2030, registering a CAGR of 10.55%. The current estimation of 2030 is projected to be higher than pre-COVID-19 estimates. The outbreak of COVID-19 has changed the face of self-service in healthcare, manufacturing, and other non-retail sectors. The pandemic has radically shifted consumer and business behavior. With increased distancing and stringent regulations, businesses are forced to stop their operations, which limits their spending on opportunistic technologies.

Despite the short-term social lockdown impact, the increased demand for groceries, medical supplies, general merchandise, and home improvement among shoppers forced businesses to adopt self-assisted technologies to promote social distancing and zero-touch practice. Furthermore, limited workforce availability due to lockdown and initiation of traveling and transportation has also led to extensive adoption of self service checkout systems.
