

Global Remote Patient Monitoring Business

Global Remote Patient Monitoring Business

SEJONG-SI, SOUTH KOREA, January 7, 2025 /EINPresswire.com/ -- "Remote Patient Monitoring (RPM) is a critical component of digital health, enabling healthcare providers to monitor patients' health remotely and intervene when necessary. This technology is transforming the way healthcare is delivered, particularly in chronic disease management and post-operative care. The market is projected to reach \$2.94 billion by 2033, growing at a CAGR of 39.4% from 2019 to 2033. This growth is driven by the increasing prevalence of chronic diseases, the need for cost-effective care, and the rising demand for patient-centric healthcare solutions. Key players in the market include Stasis, which is a leading provider of RPM solutions, and other major players like Philips, GE Healthcare, and Medtronic. The market is also seeing significant investment from venture capitalists and private equity firms, further accelerating its growth. The integration of RPM with other digital health technologies, such as artificial intelligence and machine learning, is expected to drive further innovation and adoption in the coming years. The market is also seeing a shift towards more personalized and proactive care, with RPM playing a central role in this transformation. The overall outlook for the RPM market is highly positive, with significant growth opportunities in the years ahead."
