

Newborn Screening Market Outlook: Challenges and Opportunities Ahead | To Reach \$2.0 Billion

Newborn screening is done by using a few drops of blood from the newborn's heel, for certain genetic, endocrine, and metabolic disorders, & are for hearing loss

PORTLAND, OR, UNITED STATES, January 7, 2025 /EINPresswire.com/ -- Newborn screening is a public health program aimed at identifying certain genetic, metabolic, and congenital disorders in newborn babies shortly after birth. It involves the collection of blood samples, typically obtained from a heel prick, to screen for specific conditions that may not be apparent at birth but could cause significant health problems if left undetected and untreated. The goal of newborn screening is to identify these conditions early, allowing for timely intervention and management to prevent or minimize potential health complications. The global [newborn screening market](#) was valued at \$1.1 billion in 2021, and is projected to reach \$2.0 billion by 2031, growing at a CAGR of 6.8% from 2022 to 2031.
