

# Bubba AI Launches Open Source SOC 2, ISO 27001, and GDPR Compliance Automation Platform for Startups

*Bubba AI Launches Open Source SOC 2, ISO 27001, and GDPR Compliance Automation Platform for Startups, aiming to get 100,000 startups compliant by 2032.*

SAN FRANCISCO, CA, UNITED STATES, January 8, 2025 /EINPresswire.com/ -- [Bubba AI](#) today announced the launch of its open source AI compliance automation platform, marking a significant shift in how startups achieve and maintain critical security certifications like [SOC 2](#), [ISO 27001](#), and GDPR compliance.

As the first fully open source solution in this space, Bubba AI aims to democratize access to enterprise-grade compliance tools, providing a free alternative to established platforms like Vanta and Drata. The company has set an ambitious goal of helping 100,000 companies achieve compliance by 2032.

“

We've seen incredible acceleration in how quickly startups can create and ship new software, but sales cycles remain slow due to compliance. We're building Bubba AI to eliminate these roadblocks.”

*Lewis Carhart, Founder*

The platform launches with comprehensive capabilities designed to streamline the compliance journey for early-stage companies, offering a complete suite of tools for achieving and maintaining SOC 2 attestation, ISO 27001 certification, and GDPR compliance.

Through its innovative use of AI and automation, Bubba AI simplifies complex compliance requirements into manageable, actionable steps that align with how startups actually operate. Its automated evidence collection system

continuously gathers and organizes compliance documentation from across an organization's

technology stack, dramatically reducing the manual effort typically required for audits. The integrated risk management and vendor assessment platform provides a single source of truth for security teams, replacing fragmented spreadsheets and manual processes that often overwhelm lean startup teams.

A standout feature is the platform's trust vault, which enables startups to securely share compliance documentation with potential enterprise customers, accelerating the sales process and building trust through transparency. The platform seamlessly integrates with leading HR, identity, and cloud platforms including Rippling, Deel, Google Cloud, Microsoft Azure, and AWS, enabling startups to automate their compliance processes across their entire tech stack without dedicating precious engineering resources.

"Having served as a CISO for multiple startups, I've witnessed firsthand how the high costs of compliance platforms can burden growing companies," said Lewis Carhart, Founder and CEO of Bubba AI. "We've seen incredible acceleration in how quickly companies can develop and ship new software, but the enterprise sales cycle remains painfully slow due to compliance barriers. We're building Bubba AI to eliminate these roadblocks - security compliance shouldn't be a luxury, it should be accessible to every startup from day one."

The announcement coincides with Bubba AI's acceptance into the Microsoft for Startups accelerator program, providing the company with additional resources and support to scale its platform. This strategic partnership will help enhance the platform's integration capabilities with Microsoft's ecosystem while maintaining its commitment to open source principles.

Unlike traditional compliance platforms that can cost hundreds of thousands of dollars annually - often representing a significant portion of a startup's runway - Bubba AI's open source approach allows organizations to deploy and customize the platform to their specific needs.

The platform's automated workflows and continuous monitoring capabilities significantly reduce the time and resources typically required for compliance maintenance, allowing startups to allocate resources toward product development and growth rather than managing compliance tools or maintaining manual processes.

For startups pursuing multiple compliance frameworks to expand their enterprise customer base, Bubba AI's unified control framework maps common requirements across SOC 2, ISO 27001, and GDPR, eliminating redundant work and providing a clear pathway to achieving additional certifications. This approach, combined with automated evidence collection and continuous monitoring, can reduce the typical compliance journey from months to weeks, enabling startups to close enterprise deals faster.

"We understand that for startups, every dollar and every minute counts," added Carhart. "By making enterprise-grade compliance tooling free and open source, we're removing one of the biggest barriers startups face when selling to enterprise customers. Our platform is designed to

grow with you - from your first SOC 2 certification to managing a complex multi-framework compliance program as you scale."

The platform also includes specialized features designed specifically for startup needs:

- Pre-configured templates and policies aligned with startup technology stacks
- Automated vendor due diligence to speed up procurement processes
- Integration with popular startup tools and services
- AI-powered policy generation tailored to startup operations
- Risk assessment frameworks designed for lean teams
- Compliance roadmap planning for different growth stages
