Ability of cloud analytics software to process large and massive data sets and produce easily understandable results, its easy access and connectivity by business intelligence, increased demand for analytics solutions, and integration of network infrastructures with software-defined networking (SDN) fuel the growth of the global cloud analytics market.

The cloud analytics market is segmented on the basis of solution, deployment mode, enterprise size, industry vertical, and region. Based on solution, it is segmented into cloud BI tool, enterprise information management, hosted data warehouse solution, enterprise performance management, government, risk, and compliance, analytics solution, and others. As per

deployment mode, it is divided into public cloud, private cloud, and hybrid cloud. As per enterprise size, the market is categorized into large enterprise and SME's. Depending on industry vertical, the market is categorized into BFSI, IT and telecom, government and public sector, retail and e commerce, manufacturing, healthcare, and others. Region wise, it is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

Based on enterprise size, the large enterprises segment contributed to the largest share of nearly three-fifths of the global cloud analytics market in 2021, and is expected to maintain a progressive growth during the forecast period. This is owing to the increased use of cloud analytics in big industries where it is used in application development.

Based on industry vertical, the BFSI segment held the largest share of nearly one-fourth of the global cloud analytics market in 2021, and is expected to maintain a prominent growth during the forecast period, as cloud analytics platform helps BFSI firms to secure transactions and strengthen customer experience by ensuring data confidentiality.

Covid-19 Scenario:

□ The outbreak of the Covid-19 pandemic impacted the global cloud analytics market moderately. The expansion of IT infrastructure slowed down due to a reduced supply and capacity, and the major hassle and inconvenience to upgrade all the hardware and software.

□ Moreover, owing to the use of more technologies to carry out tasks, users faced issues such as poor connectivity, slow processing speeds, and complicated data storage. However, the use of collaborative apps, analytics, security solutions, and artificial intelligence (AI) rose in the second

half of 2022.

□ During the pandemic, enterprises and governments witnessed the need for solving analytical issues while executing main business decisions. Cloud-based analytics solutions and platforms enabled them to increase operational efficiency and reduce costs.

□ Enterprises recognized the need for analytical solutions that can access huge amounts of data and allow data analysts to focus on data-driven goals to get insights from the data.
