The fresh cream and milk are blended to create cream powder, which is then pasteurized and spray-dried to make a naturally rich cream powder. Another non-dairy option for people with lactose intolerance is coconut cream powder, which is created from the mature coconut's essence and has a moderate coconut flavor. In the food processing sector, cream powder is typically used to make a variety of items, including ice cream, chocolate, sweets, biscuits, baked goods, and others. When compared to ultra-heat-treated (UHT) milk and fresh cream, cream powder's distinctive qualities—good dispersibility, solubility, flavor, high-fat content, simplicity of handling, and storage—allow it to be used in a variety of applications.

In many food processing industries, the cream powder is used to make a variety of products, including ice cream, chocolate, sweets, biscuits, baked goods, and others. Since the cream powder is used in both the dairy and bread industries, its growth is anticipated to propel the market for cream powder. Additionally, the growing popularity of baking among people all over the world is anticipated to boost the market. For instance, 46% of Australians, according to the Australian Institute of Family Studies (AIFS), were most likely to spend more time baking or engaging in creative endeavors.
