□□□□□-□□ □□□□□□ □□□□□□□□ (□□□ & □□□□) -

- **Increased demand:** The Covid-19 virus affects the respiratory system, and patients with pre-existing respiratory conditions such as asthma and COPD may be at a higher risk of severe illness. This has led to an increased demand for bronchodilators, as patients seek to manage their symptoms and prevent exacerbations.
- **Potential drug shortages:** The pandemic has disrupted supply chains for many medications, including bronchodilators. This has led to potential drug shortages and supply chain issues, which could impact patient access to these essential medications.
- **Changes in treatment protocols:** As healthcare providers have learned more about Covid-19, treatment protocols have evolved. Some studies have suggested that bronchodilators may not be effective in treating Covid-19-related respiratory symptoms and may even be harmful in some cases. As a result, healthcare providers may be more cautious in prescribing bronchodilators to Covid-19 patients.
- **Increased use of telemedicine:** The pandemic has led to a surge in the use of telemedicine, as healthcare providers seek to minimize in-person interactions and reduce the risk of

transmission. This has made it easier for patients with respiratory conditions to access care, including bronchodilators, from the safety of their homes.
