What is propelling the growth of the enbrel mini market?

A key growth driver that is paving the way for the robust expansion of the enbrel mini market is the increasing prevalence of autoimmune disorders. Autoimmune disorders refer to the group of diseases wherein the immune system mistakenly attacks the body's healthy cells, tissues, or organs. This is driven by various factors: genetic predisposition, environmental exposures, and lifestyle changes such as poor diet and heightened stress levels.

Attention is brought to Enbrel Mini, a subcutaneous injection that effectively treats autoimmune disorders by managing conditions such as rheumatoid arthritis, psoriatic arthritis, and ankylosing spondylitis. It does so by targeting the tumor necrosis factor TNF, a pivotal protein in the inflammatory process.

For instance, a report published by the Australian Institute of Health and Welfare in June 2024 noted that there were 10,000 hospitalizations for rheumatoid arthritis in the fiscal year of 2021–22. That's an alarming 25% increase from the former year's total of 8,000, amounting to a rate of 39 hospitalizations per 100,000 population. Therefore, it is without a doubt that the increasing prevalence of autoimmune disorders is priming the engine of the enbrel mini market growth.
