# Effects SDK Launches Chrome Extension to Remove Background Noise and Enhance Sound Quality in Live Audio and Video

Effects SDK's Background Noise Remover Showcases Advanced Noise-Cancelling Features of Its Audio SDK, Which Can Be Easily Integrated Into Apps and Services.

HALLANDALE BEACH, FL, UNITED STATES, January 20, 2025 /EINPresswire.com/ -- Effects SDK, a leading provider of advanced AI technologies for live audio and video, is excited to announce the launch of its new Background Noise Remover Chrome Extension. Powered by cutting-edge AI algorithms, this tool instantly suppresses background noise during live audio and video sessions, delivering crystal-clear sound quality for users across virtual communication and content creation platforms.

Advanced SDKs for live audio and video communication

> **"**
>
> This Chrome extension, along with our Audio SDK, provides advanced noise-cancelling technology for anyone looking to improve their daily communication or enhance their products."
>
> *Max Troshin, Co-Founder and CEO of Effects SDK*

This free extension is available for all users, helping individuals improve their virtual meetings, video calls, live streaming, and audio/video recordings—anywhere background noise could disrupt their communication experience.

"We have developed this extension as a key part of a larger project to showcase the potential of our Audio SDK," said Max Troshin, CEO of Effects SDK. "Our goal was to create a simple, user-friendly tool that both individuals and professionals can easily use to enhance their virtual communication and content creation. We're proud to offer it as a free resource, hoping it will accelerate the adoption of our audio technologies across platforms and services."

AI Noise Cancellation for All Use Cases

The AI-powered Background Noise Remover utilizes advanced machine learning techniques to analyze and filter unwanted noise from microphone input, ensuring that only the user's voice is captured with perfect clarity. This extension offers an easy and effective solution to create a professional-quality sound environment without the need for expensive equipment or complex software setups.

AI Noise Suppression Solutions

Whether you're a business professional seeking a distraction-free online meeting, a content creator aiming for crystal-clear audio in your videos, or a live streamer striving to deliver the best possible audio experience to your audience, the Effects SDK Background Noise Remover ensures your voice stands out, free from unwanted background sounds.

Background Noise Remover—One of the Best Alternatives to Sophisticated and Expensive Noise-Cancelling Software

Several factors make the Background Noise Remover the ideal solution for enhancing the sound quality of virtual communication and recordings.

First, its one-click installation and ease of use. Many noise-cancelling software solutions are complex and require advanced setups, making them inaccessible to non-professional users. Background Noise Remover is designed to be simple and intuitive, offering a seamless user experience.
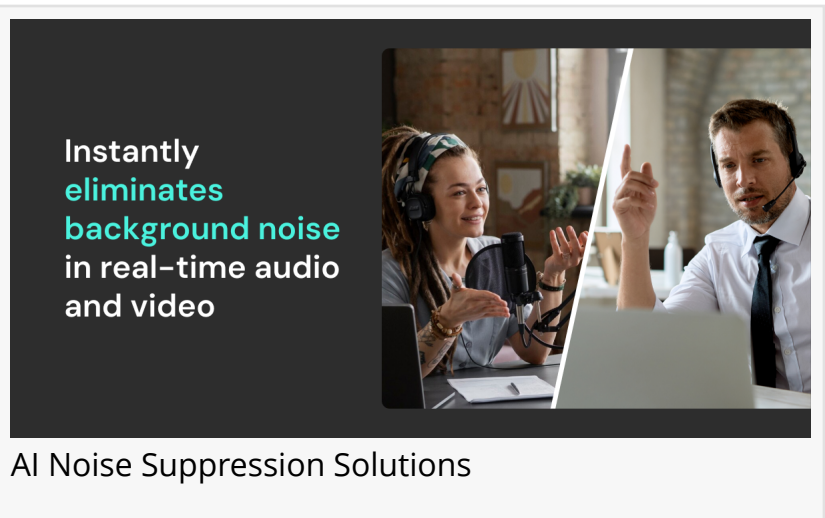

Another key factor is its broad compatibility. While some noise-cancelling software works only with specific hardware or software, Background Noise Remover is compatible with virtually any platform that operates through a browser. While browser extensions have limitations, they remain one of the most accessible and widely used forms of software.

Lastly, affordability is a major advantage. Many existing noise suppression solutions can be prohibitively expensive for non-professional end users. Today, Background Noise Remover is available as a completely free extension, with no limitations.

These factors make Effects SDK's extension one of the most accessible and effective AI noise-cancelling tools for a wide range of users. The same applies to its Audio SDK, which is known for its seamless and fast integration, cross-platform compatibility, and flexible pricing.

About Effects SDK

With 7 years of expertise in AI and machine learning, Effects SDK delivers advanced technologies for live audio and video communication. Our mission is to empower partners—both businesses and developers—with high-quality, easily integrated solutions that help them implement new

product features, enhance user experiences, and reduce both development costs and time-to-market.
