What is the Projected Market Size and Growth Rate of the

[Stelara Ustekinumab Market?](#)

The Stelara ustekinumab market is projected to see substantial growth in the coming years. It is forecasted to increase to \$14,768.48 million in 2029 at a compound annual growth rate CAGR of 5.7%. The growth in the forecast period can primarily be attributed to expanding indications for stelara, an increasing prevalence of autoimmune diseases, high efficacy in refractory cases compared to alternatives, rising awareness among patients and healthcare providers, and an ongoing focus on personalized medicine. Major trends in the forecast period include adoption of biologic therapies, development of advanced drug delivery systems, and data-driven healthcare systems.

What Growth Drivers Underpin the Stelara Ustekinumab Market?

The rise in prevalence of psoriasis patients is a significant propellant for the growth of the Stelara ustekinumab market. Psoriasis patients, affected by a chronic autoimmune disorder that accelerates skin cell turnover, results in red, scaly patches. The rise in prevalence can be attributed to multiple factors such as improved diagnosis, environmental triggers, genetic predisposition, and an aging population. Stelara ustekinumab works by targeting and inhibiting interleukin-12 and interleukin-23, helping psoriasis patients by effectively reducing inflammation and plaque formation. This action leads to improved skin clearance and long-term symptom management, ultimately enhancing the quality of life for these patients.
