Forecasts

Why Is Duchenne Muscular Dystrophy DMD A Major Factor Driving Growth For Amondys 45? Duchenne muscular dystrophy DMD is a genetic disorder characterized by progressive muscle degeneration, primarily affecting boys. This condition is driven by a deficiency of the dystrophin protein. The growing prevalence of DMD is anticipated to drive the demand for Amondys 45, a therapy that targets patients with a specific genetic mutation of the exon 45. The rise in DMD prevalence can be attributed to improved diagnosis and awareness, advancements in genetic testing, better record-keeping, and increased symptom recognition. The February 2022 report by the National Institutes of Health NIH highlighted a global prevalence of muscular dystrophy at 3.6 per 100,000 people. It further underlined a significant prevalence in the Americas at 5.1 per 100,000 people.
