As genetic diagnosis and treatment evolve from the cellular level to clinical practice, the information and tools available to clinicians are expected to expand dramatically over the next decade. Advances in less invasive imaging, such as computer-assisted diagnosis of coronary artery disease through combined modalities like echocardiography, magnetic resonance imaging, and positron emission tomography, will enhance outcomes and enable quicker recovery through catheter-based treatments.

Authenticated data presented in the CBCT Dental Imaging Market report is based on findings of extensive primary and secondary research. On the basis of historic growth analysis and the current scenario of the market, the report intends to offer actionable insights and an outlook on global/regional market growth projections.
