

OpiAID Strongly Supports \$500 Billion Stargate Initiative and the Role of AI in the Future of Healthcare

Tech CEO Highlights AI's Transformative Potential in Revolutionizing Healthcare and Addiction Recovery

WILMINGTON , NC, UNITED STATES, January 23, 2025 /EINPresswire.com/ --

[OpiAID](#), an AI-powered data science company focused on combating the opioid epidemic, is a strong supporter of the \$500 billion [Stargate](#) initiative.

This landmark initiative, aimed at positioning the United States as a global leader in artificial intelligence (AI), represents a critical step in advancing AI infrastructure across the country. With the opioid crisis continuing to devastate communities, OpiAID believes AI is poised to play an essential role in transforming healthcare, improving outcomes, and saving lives.

The Stargate initiative, announced earlier this week by President Trump, brings together major tech companies including OpenAI, Oracle, and SoftBank to build next-generation AI infrastructure that will enable innovative solutions to some of the country's most pressing challenges. OpiAID strongly supports this vision and is committed to using its advanced AI platform to address the opioid epidemic, particularly by enhancing clinical decision-making and supporting healthcare professionals in providing the best care possible.

"We are proud to support the Stargate initiative and its ambitious goals for AI," said David Reeser, CEO of OpiAID. "We see this as a vital opportunity to accelerate AI innovation, especially in healthcare. The use of AI to improve care and outcomes in the fight against the opioid epidemic is a natural next step, and we are committed to being part of this transformative movement."

Dr. Marc Siegel, Fox News contributor and physician, has consistently highlighted the potential of AI to support rather than replace clinicians. In a recent segment on Fox & Friends Siegel shared his thoughts on AI's role in healthcare. "AI should not be is like an instant replay call—I don't want AI to tell me what I got wrong; I want AI to help me get it right," said Siegel.

"We fully support Dr. Siegel's view," Reeser continued. "AI should not be a tool for second-guessing doctors. Instead, it should empower clinicians by providing real-time, data-driven insights that help them make informed decisions for their patients. By integrating biometric data and electronic health records, OpiAID's platform enhances the doctor-patient relationship and ultimately improves patient outcomes."

OpiAID's strong support for the Stargate initiative underscores its belief in the transformative potential of AI in healthcare. The company's mission is to use AI not only to address the opioid epidemic but also to lead the way in developing solutions that bring technology and compassion together to improve the lives of patients across the country.

As the Stargate initiative moves forward, OpiAID remains committed to advancing the role of AI in healthcare and supporting the infrastructure that will drive this future.

About OpiAID

OpiAID is a leading data science company revolutionizing the treatment of opioid use disorder with AI-powered solutions. Focused on improving care outcomes and saving lives, OpiAID combines advanced technology with a compassionate approach to combat the opioid epidemic. Visit <https://opiaid.ai> to learn more.
