Gigasheet Unveils Solution for Healthcare Price Transparency Data

LEESBURG, VA – Gigasheet, a leading provider of self-service data analytics, today announced a comprehensive solution designed to transform healthcare price transparency data into actionable insights. The platform combines intelligent data transformation, multi-source data enrichments, and AI-supported analytics in an intuitive interface, enabling healthcare providers, payers, and industry consultants to efficiently analyze massive Machine-Readable Files (MRFs) mandated by the Transparency in Coverage (TiC) rule.

"Healthcare pricing data is enormous and challenging to work with, but our solution democratizes access to this information," said Jason Hines, CEO of Gigasheet. "While transparency data is still far from perfect, it is proving to be a valuable component in negotiations and strategic planning. Now anyone with basic spreadsheet skills can get value from this data without requiring specialized technical skills or purpose-built data processing infrastructure."

The healthcare industry faces a significant challenge with MRFs, which contain detailed price transparency data from insurers and hospitals, including negotiated rates and out-of-network charges. While these files hold valuable insights, their immense size—often containing billions of data points—has made them practically unusable without advanced technical resources. Gigasheet's technology addresses this challenge by enabling users to filter, explore, and distill intelligence from these datasets through an intuitive spreadsheet-like interface.

At the heart of the solution is Gigasheet's intelligent JSON parsing engine, which leverages advanced algorithms and AI-driven inference to transform complex MRF schemas into accessible tabular formats. The platform enhances data quality through sophisticated filtering capabilities that focus on relevant specialties and incorporate provider taxonomy codes. Additionally, the system enriches datasets with Medicare regional reimbursement rates tied to practice locations, enabling more accurate benchmarking against industry standards.

The solution's AI-assisted interface transforms payer and hospital MRFs, and employer plan data into detailed reports and strategic insights. This capability enables healthcare organizations to identify pricing trends, analyze competitive positions, and make data-driven decisions about service offerings and pricing strategies.

Dr. Timothy Mountcastle, Chief of Plastic Surgery Emeritus at INOVA Loudoun Hospital, emphasized the solution's practical impact: "Gigasheet's price transparency data transforms how we understand the market, making complex data easy to navigate. It's invaluable for negotiating and staying competitive in today's healthcare landscape."

Gigasheet offers multiple tiers to meet diverse organizational needs, from small practices to nationwide enterprises. Its API supports seamless integration with enterprise data stores,

enabling broad connectivity and data export in standard formats. This flexibility ensures that organizations of all sizes can effectively leverage healthcare pricing data for strategic decision-making and market analysis.

As healthcare pricing continues to face increasing scrutiny, Gigasheet's solution provides a timely tool for organizations seeking to navigate the complex landscape of price transparency requirements while gaining competitive insights from market data.

About Gigasheet

Founded in 2020, Gigasheet has rapidly emerged as a leader in data analytics, serving over 150,000 users worldwide. The company's patented technology and SOC 2 Type II compliant platform enable organizations to work with vast datasets securely and efficiently, from healthcare analytics to enterprise-scale data solutions.
