Is the [Evenity Market](#) Set to Witness Substantial Growth?

“

Updated 2025 Market Reports Released: Trends, Forecasts to 2034 – Early Purchase Your Competitive Edge Today!”

The Business research company

Historically, the evenity market has displayed considerable growth, showcasing XX HCAGR. From a baseline of \$XX million in 2024, the market size swelled to \$XX million in 2025, featuring a compound annual growth rate CAGR of XX%. Factors such as increased osteoporosis awareness, prevention of bone fractures, demand for biologic drugs, growth in the elderly demographic, advancements in diagnostic capabilities and bone health products were the remarkable contributors to this notable evolution.

Looking into the future, the evenity market projects an optimistic XX FCAGR, expecting growth from \$XX million in 2025 to \$XX million in 2029, with an estimated compound annual growth rate CAGR of XX%. This upward trend is attributed to a readily acceptance of biologic and advanced injectables, increasing instances of osteoporosis, rising incidences of chronic kidney disease CKD, prevalence of rheumatoid arthritis, and a surge in comorbidities.

Beyond these, the forecast period also points to a convergence of innovative trends such as the development of sophisticated delivery systems, digital health tools integration, adoption of biosimilars, exciting new therapies, and revolutionary diagnostic technologies.

What Drives The Evenity Market Growth?

A notable driving force of the evenity market's growth is the increasing prevalence of osteoporosis. Essentially, osteoporosis is a medical condition that reduces bone density and quality, rendering bones more susceptible to fractures. It owes its rise to an aging population which exhibits naturally declining bone density and sedentary lifestyles that jeopardize skeletal strength. Evenity is then administered to these individuals via a monthly injection treatment course running up to 12 months. Its function helps to increase bone formation, reduce bone resorption, and strengthen bones to prevent fractures. To this effect, a report by the UK Parliament in 2022 highlighted that osteoporotic fractures impose direct costs amounting to over \$5.8 billion £4.6 billion on the NHS. By 2030, these costs are expected to reach approximately \$7.5 billion £6 billion, courtesy of an aging populace.
