

Revolutionizing Legionella Prevention: Introducing Legionella Control Systems' Patented Water Softener System

Legionella Control Systems launches its patented water softener system that mitigates Legionella while delivering superior water softening efficiency.

INDIANAPOLIS, IN, UNITED STATES, January 27, 2025 /EINPresswire.com/ -- [Legionella Control Systems](#) proudly announces the launch of its innovative, Legionella Dominator™ (patent US 11,820,677) water softener system designed to mitigate key risks associated with Legionella growth while delivering superior operational water softening efficiency.

Combat Legionella at the Source

“

Our water softeners ensure all tanks remain online, virtually eliminating stagnation, controlling temperature, and reducing Legionella growth potential.”

Chris Nancrede, President of Legionella Control Systems

Water hardness contributes to scale buildup, creating an environment where Legionella bacteria can thrive. While water softening reduces this risk, traditional multi-tank softeners often introduce their own challenges, including water stagnation and water temperatures ideal for Legionella growth, two leading risk factors that cause Legionella proliferation.

Chris Nancrede, President of Legionella Control Systems, explained, “We have engineered a groundbreaking solution to address these risks. Our water softeners ensure all

tanks remain online, virtually eliminating stagnation, controlling temperature and reducing Legionella growth potential. This continuous operation prevents disinfectant dissipation and ensures consistent water movement, disrupting the conditions Legionella needs to colonize.”

Temperature Control for Safer Water

Traditional systems often create an environment for stagnant water, which warms to ideal bacterial growth ranges, creating favorable conditions for Legionella. Legionella Control Systems' innovative design ensures constant water flow, reducing water temperatures, minimizing water stagnation and enhancing safety throughout the system.

Unparalleled Efficiency and Protection
The Legionella Control Systems' patented two-stage softening process reduces salt usage by up to 40%, lowering overhead while increasing water quality and system redundancy. One tank focuses on hardness removal while the second polishes the water, delivering exceptional performance. Moreover, by avoiding excessive downtime, these systems protect downstream equipment from damage caused by exposure to hard water.

The Ideal Solution for Facilities
Whether your goal is to minimize

Legionella risk, optimize system efficiency, or reduce operational costs, Legionella Control Systems' water softeners offer an outstanding solution.
