Mobile gimbal market growth may be hampered by smartphone manufacturers' integrated camera stabilization since many smartphones already have built-in motion stabilization features. Optical image stabilization (OIS), which lessens blurriness in photos and videos

caused by erratic motion, is frequently employed by smartphone cameras. (EIS) Another method for mitigating hand tremors that cause disturbing video shakes during playback is electronic picture stabilization. Numerous smartphone applications have also been created to deal with blurry photographs. The development of the gimbal market may be hindered by the range of

less expensive alternatives to gimbals.

The factors such as the rise in the global entertainment and media industry coupled with the surge in the number of vloggers are expected to drive the growth of the mobile gimbal market. However, integrated camera stabilization being offered by smartphone manufacturers can hamper the market growth during the forecast period. The rise in expenditure on mobile accessories by the global population is expected to further propel the growth of the market and the increase in investment by online creators is expected to propel the demand for the mobile gimbal market.

The mobile gimbal market is segmented into stabilization type, price point, distribution channel, and region. By stabilization type, the market is bifurcated into 3-Axis Stabilization and 2-Axis Stabilization. By price point, the market is classified into a premium, mid-range, and low/economic. By distribution channel, the market is bifurcated into offline channels and online channels. Region-wise, the market is studied across North America, Europe, Asia-Pacific, and LAMEA.

On the basis of price-point, the mobile gimbal market is further segmented into premium, mid-range, and low/economic. The low/economic segment dominated the global mobile gimbal market and is expected to retain its dominance during the mobile gimbal market forecast period. The mobile gimbals from this segment are expected to have great growth opportunities mainly in developing economies such as China, India, and Brazil. These developing nations are characterized by the rising number of vloggers, and content creators coupled with rapid urbanization and rising disposable income. Moreover, the trend of content creation among the youth of developing nations will further boost the growth of the mobile gimbal industry.

On the basis of stabilization type, the mobile gimbal market is further bifurcated into 3-Axis Stabilization and 2-Axis Stabilization. The two-axis segment dominated the mobile gimbals market owing to its lightweight, longer-lasting battery, and cost-convenience. The two-axis gimbal is more suitable for the person who is new to videography and is looking for something to practice because humans have better control on lateral (left and right) hand movements. The segment is expected to witness higher growth owing to the rise in the number of content creators.

On the basis of distribution channels, the mobile gimbal market is categorized into offline and online distribution channels. The offline segment is further divided into hypermarkets, convenience stores, and mobile stores whereas the online segment is further segmented into direct and indirect distribution. The online segment is projected to witness the highest growth during the forecast.

The basis of region, the market is further segmented into North America (the U.S., Canada, and Mexico), Europe (UK, Germany, France, Italy, Spain, and the Rest of Europe), Asia-Pacific (China, India, Japan, Australia, New Zealand, and the rest of Asia-Pacific), and LAMEA (Brazil, Argentina, Saudi Arabia, South Africa, and the rest of LAMEA). North America is one of the largest consumer goods markets in the world that comprises the U.S., Canada, and Mexico. It is a mature region where consumers have high purchasing power.

The key leading players operating in this market include Glidecam Industries, Inc., Gudsen Technology Co., Ltd., Flyfilms, Shape, Letus Corporation, Ikan Corporation, Tilta Inc., Ningbo Eimage Studio Equipment Co., Ltd., SZ DJI Technology Co., Ltd., and Rhino.

□□□ □□□□□□□□ □□ □□□ □□□□□:
