What are the Key [Growth Drivers for the M-M-R II Market?](#)

The rising prevalence of measles, mumps, and rubella diseases is envisaged to propel the M-M-R II market forward. These disorders are highly infectious viral diseases that can result in severe health complications, manifesting symptoms such as fever, rash, swelling, and in acute cases, causing neurological damages or congenital disabilities, if contracted during pregnancy.

The upsurge in cases of these diseases is attributed to lower vaccination rates, gaps in immunization coverage, and vaccine hesitancy amongst certain demographics. The M-M-R II vaccine safeguards against these diseases by stimulating the immune system to produce antibodies that protect against these viruses, thus reducing the risk of infection and consequential health issues.

Substantial players in the M-M-R II marketplace include Merck & Co. Inc., key manufacturers who are making significant strides in this sector.
