What's driving this formidable growth in the lemrada market?

One cannot overlook the significant role that the rise in the population suffering from multiple sclerosis plays in propelling the growth of the lemrada market forward. Multiple Sclerosis MS, a long-term autoimmune disorder, leads to the immune system wrongfully attacking and damaging the protective sheath encasing nerve fibers in the central nervous system. This triggers inflammation and injury. Lamentably, multiple sclerosis is linked to an autoimmune dysfunction where the immune system strikes the myelin sheath of nerve fibers in the central nervous system. This is influenced by a combination of genetic, environmental, and hormonal factors. The saving grace comes in the form of Lemtrada alemtuzumab, which aids multiple sclerosis patients by aiming at and depleting overactive T and B lymphocytes. These are the immune cells guilty of attacking the myelin sheath in the central nervous system. This process reduces inflammation, decelerates disease progression, minimizes the frequency of relapses, and curbs the formation of new brain and spinal cord lesions. It further empowers the immune system to reset and rebound with a more balanced response thus reducing further harm.
