

Recurrent Respiratory Papillomatosis Market Revenue to Expand Significantly by 2034, States DelveInsight Report

DelveInsight's Recurrent Respiratory Papillomatosis Market report offers an in-depth understanding of the epidemiology and market trends in the 7MM.

LAS VEGAS, NV, UNITED STATES,
February 3, 2025 /EINPresswire.com/ --

DelveInsight's "Recurrent Respiratory Papillomatosis Market Insights, Epidemiology, and Market Forecast-2034" report offers an in-depth

understanding of the Recurrent Respiratory Papillomatosis, historical and forecasted epidemiology as well as the Recurrent Respiratory Papillomatosis market trends in the United States, EU4 (Germany, Spain, Italy, France) the United Kingdom and Japan.

The latest healthcare forecast report provides an in-depth analysis of Recurrent Respiratory Papillomatosis, offering comprehensive insights into the Recurrent Respiratory Papillomatosis revenue trends, prevalence, and treatment landscape. The report delves into key Recurrent Respiratory Papillomatosis statistics, highlighting the current and projected market size, while examining the efficacy and development of emerging Recurrent Respiratory Papillomatosis therapies. Additionally, we cover the landscape of Recurrent Respiratory Papillomatosis clinical trials, providing an overview of ongoing and upcoming studies that are poised to shape the future of Recurrent Respiratory Papillomatosis treatment. This report is an essential resource for understanding the market dynamics and the evolving therapeutic options within the Recurrent Respiratory Papillomatosis space.

Some of the key facts of the Recurrent Respiratory Papillomatosis Market Report:

- The Recurrent Respiratory Papillomatosis market size was valued ~USD 10.26 million in 2023 and is anticipated to grow with a significant CAGR of 39.9% during the study period (2020-2034)
- In December 2024, Precigen, Inc. announced that it has completed the submission of its biologics license application (BLA) to the FDA for PRGN-2012 (zopapogene imadenovect) as a treatment for adult recurrent respiratory papillomatosis (RRP).
- In August 2024, Precigen announced a strategic shift to concentrate on the potential commercialization of PRGN-2012. As part of this realignment, the company will reduce its workforce by 20% and halt all preclinical programs. This decision highlights Precigen's dedication to advancing PRGN-2012 and reallocating resources to enhance its commercial potential.
- In August 2024, Inovio Pharmaceuticals announced progress toward submitting its Biologics License Application (BLA) through the FDA's Accelerated Approval pathway, following a pre-BLA meeting and the advancement of BLA modules. However, a manufacturing issue with the disposable component of the CELLECTRA device has delayed the submission until mid-2025. Inovio is actively working to resolve this issue and is expected to provide further updates in its next quarterly report.
- In June 2024, Promising results from the Phase I/II pivotal study of PRGN-2012, an investigational off-the-shelf AdenoVerse gene therapy for RRP, were shared and presented during a late-breaking oral session at the 2024 American Society of Clinical Oncology (ASCO) annual meeting
- The EU4 and the UK represented about 16% of the 7MM market size, with the RRP market valued at approximately USD 1.66 million in 2023.
- In 2023, Germany had the largest market size for RRP among the EU countries, reaching nearly USD 0.45 million, whereas Spain had the smallest market size, approximately USD 0.25 million.
- The overall market size of RRP is expected to increase during the forecast period, driven by the anticipated introduction of emerging therapies such as INO-3107, PRGN-2012, and others.
- Key Recurrent Respiratory Papillomatosis Companies: Precigen, Inc., Inovio Pharmaceuticals, and others
- Key Recurrent Respiratory Papillomatosis Therapies: PRGN-2012, INO-3107, and others
- The Recurrent Respiratory Papillomatosis market is expected to surge due to the disease's increasing prevalence and awareness during the forecast period. Furthermore, launching various multiple-stage Recurrent Respiratory Papillomatosis pipeline products will significantly revolutionize the Recurrent Respiratory Papillomatosis market dynamics.
- The total number of diagnosed prevalent cases of RRP in the US was approximately 16,980 in 2023 and is expected to rise during the forecast period.
- According to DelveInsight's estimates, the US has the highest number of diagnosed prevalent cases of RRP among the 7MM, followed by the EU4 and the UK, with Japan contributing to 24% and 10% of all RRP cases, respectively.
- In 2023, Japan reported the highest number of RRP cases in adults aged 18 and older (~2,400), followed by adolescents aged 9-17 years (~50). The fewest cases were observed in children aged 0-8 years, with a total of approximately 25.
- In 2023, the EU4 and the UK reported a total of approximately 6,240 diagnosed prevalent cases of RRP, with around 5,740 cases linked to HPV 6 and/or HPV 11, and about 500 cases associated with other high-risk subtypes such as HPV-16, 18, 31, 33, and 39. The large number of cases

related to HPV 6 and 11 highlights the dominant role these strains play in RRP, as they are the primary causative agents.

- In 2023, Germany reported the highest number of diagnosed prevalent RRP cases among the EU4 and the UK, with nearly 1,684 cases. France followed with around 1,370 cases, Italy had approximately 1,220, the UK reported about 1,022, and Spain had the lowest with roughly 944 cases. This distribution underscores the differing disease burden across European countries.

Recurrent Respiratory Papillomatosis Overview

Recurrent Respiratory Papillomatosis (RRP) is a rare condition characterized by the growth of benign tumors, called papillomas, in the airways, primarily affecting the larynx, trachea, and bronchi. These growths are caused by infection with the human papillomavirus (HPV), particularly types 6 and 11. RRP can lead to airway obstruction, hoarseness, breathing difficulties, and recurrent infections. The condition is chronic, often requiring repeated surgical interventions to remove the papillomas. It can occur in both children (juvenile-onset RRP) and adults (adult-onset RRP), with varying severity and progression.

Recurrent Respiratory Papillomatosis Epidemiology

The epidemiology section provides insights into the historical, current, and forecasted epidemiology trends in the seven major countries (7MM) from 2020 to 2034. It helps to recognize the causes of current and forecasted trends by exploring numerous studies and views of key opinion leaders. The epidemiology section also provides a detailed analysis of the diagnosed patient pool and future trends.

Recurrent Respiratory Papillomatosis Epidemiology Segmentation:

The Recurrent Respiratory Papillomatosis market report proffers epidemiological analysis for the study period 2020–2034 in the 7MM segmented into:

- Total Prevalence of Recurrent Respiratory Papillomatosis
- Prevalent Cases of Recurrent Respiratory Papillomatosis by severity
- Gender-specific Prevalence of Recurrent Respiratory Papillomatosis
- Diagnosed Cases of Episodic and Chronic Recurrent Respiratory Papillomatosis

Recurrent Respiratory Papillomatosis Drugs Uptake and Pipeline Development Activities

The drugs uptake section focuses on the rate of uptake of the potential drugs recently launched in the Recurrent Respiratory Papillomatosis market or expected to get launched during the study

period. The analysis covers Recurrent Respiratory Papillomatosis market uptake by drugs, patient uptake by therapies, and sales of each drug.

Moreover, the therapeutics assessment section helps understand the drugs with the most rapid uptake and the reasons behind the maximal use of the drugs. Additionally, it compares the drugs based on market share.

The report also covers the Recurrent Respiratory Papillomatosis Pipeline Development Activities. It provides valuable insights about different therapeutic candidates in various stages and the key companies involved in developing targeted therapeutics. It also analyzes recent developments such as collaborations, acquisitions, mergers, licensing patent details, and other information for emerging therapies.

Recurrent Respiratory Papillomatosis Therapies and Key Companies

- PRGN-2012: Precigen, Inc.
- INO-3107: Inovio Pharmaceuticals

Recurrent Respiratory Papillomatosis Market Drivers

- Increasing Incidence of HPV Infections
- Advancements in Surgical and Therapeutic Options
- Rising Awareness and Early Diagnosis
- Improved Treatment Modalities
- Research and Development Investments

Recurrent Respiratory Papillomatosis Market Barriers

- Limited Awareness and Diagnosis
- Lack of Cure
- High Treatment Costs
- Fragmented Treatment Landscape
- Limited Availability of Effective Therapies
- Challenges in HPV Vaccination Implementation

Scope of the Recurrent Respiratory Papillomatosis Market Report

- Study Period: 2020–2034
- Coverage: 7MM [The United States, EU5 (Germany, France, Italy, Spain, and the United Kingdom), and Japan]
- Key Recurrent Respiratory Papillomatosis Companies: Precigen, Inc., Inovio Pharmaceuticals, and others
- Key Recurrent Respiratory Papillomatosis Therapies: PRGN-2012, INO-3107, and others
- Recurrent Respiratory Papillomatosis Therapeutic Assessment: Recurrent Respiratory Papillomatosis current marketed and Recurrent Respiratory Papillomatosis emerging therapies
- Recurrent Respiratory Papillomatosis Market Dynamics: Recurrent Respiratory Papillomatosis market drivers and Recurrent Respiratory Papillomatosis market barriers
- Competitive Intelligence Analysis: SWOT analysis, PESTLE analysis, Porter's five forces, BCG Matrix, Market entry strategies

- Recurrent Respiratory Papillomatosis Unmet Needs, KOL's views, Analyst's views, Recurrent Respiratory Papillomatosis Market Access and Reimbursement
