Allied Market Research has published a study report with the title [Orthopedic Implants Market1](#) Size was Valued at USD 47.19 billion in 2022 and is Projected to Garner USD 73.32 billion by 2032, registering a CAGR of 4.5% from 2023 to 2032.

report, titled, "Orthopedic Implants Market Size, Status and Forecast, 2022-2032" (Allied Market Research, Portland, OR, United States, February 5, 2025),

Increase in the prevalence of orthopedic injuries or diseases such as arthritis and osteoarthritis and rapid surge in the aging population across the world who are more prone to orthopedic diseases drive the growth of the global orthopedic implants market. On the other hand, factors such as the high cost associated with procedures involving orthopedic implants treatment and stringent government policies regarding the implants impede the growth to some extent.

However, rise in adoption of orthopedic implants, increase in awareness about the same, and favorable government policies for the development of orthopedic implants are expected to create lucrative opportunities in the industry.

By product type, the reconstructive joint replacements segment held the major share in 2022, generating more than one-third of the global orthopedic implants market revenue, and is expected to rule the roost by 2032. Increase in the prevalence of osteoporosis and osteoarthritis and rise in investment by the key players in the R&D of orthopedic implants drive the growth of the segment. The ortho-biologics segment, on the other hand, would showcase the fastest CAGR of 6.0% from 2023 to 2032. Rise in demand for advanced therapies and minimally invasive procedures and surge in patient awareness toward the use of orthobiologics fuel the segment growth.

By biomaterial, the metallic biomaterials segment contributed to the highest share in 2022, holding nearly two-thirds of the global orthopedic implants market revenue, due to the cost-effectiveness of these materials. The others segment, however, would showcase the fastest CAGR of 5.5% throughout the forecast period. This is owing to the growing demand for these materials due to several advantages over synthetic biomaterials.

By type, the knee segment accounted for around one-fourth of the global orthopedic implants market share in 2022, and is expected to retain its dominance by 2032. Surge in demand for knee implants due to increase in the prevalence of orthopedic diseases and rise in road accidents, sports injuries, and others propel the segment growth. The spine segment, simultaneously, would portray the fastest CAGR of 6.0% during the forecast period. This is attributed to the increase in the geriatric population and the rise in the incidence of spinal

disorders.

By region, North America held the highest share in 2022, generating nearly half of the global orthopedic implants market revenue. Increase in the prevalence of orthopedic disorders, rise in the geriatric population, high healthcare expenditure, and the presence of major key players offering advanced orthopedic implants across the region drive the market growth. Asia-Pacific, at the same time, would display the fastest CAGR of 6.4% from 2023 to 2032. This is due to rise in R&D activities, increase in the prevalence of arthritis & sport-related injuries, unmet medical demands, and surge in investments in the healthcare sector in the region.
