What are the key drivers triggering the growth of the rebif market?

The growth of the rebif market is primarily attributed to the increasing prevalence of multiple sclerosis MS, a long-term autoimmune condition affecting the central nervous system. Factors like enhancement in diagnostic techniques, demographic and lifestyle shifts, and potential genetic predispositions, particularly affecting women due to hormonal changes, contribute towards it. Rebif functions by curating the immune system and reducing inflammation, thereby preventing damage to the protective sheath of nerve fibers. This helps manage MS symptoms and reduce disease activity, which is a significant factor driving its demand in the market.
