increasing healthcare spending, beneficial reimbursement
policies, an increasing preference for combination
therapies, and the burgeoning elderly population.

Are there expectations for significant growth in the repatha
market size in the coming years?

The repatha market's encouraging progress displays no
sign of slowing down any time soon. Forecast to reach \$XX
million by 2029, the market is expected to expand at a
compound annual growth rate CAGR of XX%. Industry

insiders attribute this predicted growth during the forecast period to several key factors. These
include a shift in healthcare towards personalized treatments, expanding healthcare access,
increased emphasis on preventing cardiovascular events, the growing prominence of
telemedicine, and the surge of investment in cardiovascular research. Major trends that are
predicted to shape this period include advancements in monoclonal antibody technology,
innovations in drug-delivery systems, the integration with digital health platforms, the rise of
combination therapies, and the development of long-acting formulations.

What's the primary driver of repatha market growth?

The increasing prevalence of cardiovascular diseases CVDs is a significant driver propelling the growth of the repatha market forward. These conditions, which include coronary artery disease, heart attacks, strokes, and hypertension, affect the heart and blood vessels. Rising incidences of CVDs have been linked to poor diet, lack of physical activity, tobacco use, excessive alcohol consumption, high blood pressure, and genetic predisposition. Repatha evolocumab is a form of treatment for cardiovascular diseases. It works by lowering LDL cholesterol levels, hence reducing the risk of heart attacks, strokes, and other cardiovascular events in patients with high cholesterol or atherosclerotic cardiovascular disease. For instance, recent data from the British Heart Foundation, a UK-based cardiovascular research charity, reports approximately 7.6 million individuals in the UK currently impacted by heart and circulatory diseases as of September 2024, with 4 million men and 3.6 million women accounting for these figures. By 2030, this number could increase by 1 million, and by 2040, it may rise to an additional 2 million more than the current figures.
