

Anti-counterfeit Packaging (Food and Beverages) Market To Project Robust Growth With A CAGR Of 5.5% By 2031

WILMINGTON, DE, UNITED STATES, February 6, 2025 /EINPresswire.com/ -- Global [Anti-counterfeit Packaging Market](#) size was valued at \$62,529.2 million in 2020, and is projected to reach \$116,299.9 million by 2031, registering a CAGR of 5.5% from 2022 to 2031.

Various anti-counterfeit trade associations are actively participating through campaigns and awareness program to increase the adoption of anti-counterfeit technologies. The implementation of anti-counterfeit technologies in food & beverages products ensures the environmental and healthcare safety of consumers. The demand for anti-counterfeit technologies in Asia-Pacific is on the rise, as local manufacturers of food products are investing in product protection activities to maintain their brand image in their respective market.

Global anti-counterfeit packaging market is emerging from last decade. Increase in incidences of counterfeiting of retail products boosts the growth of anti-counterfeiting market. Counterfeiters tend to target packaged food products, owing to minimum control over the supply chain. Developing economies largely get affected by such counterfeiting practices due to presence of customers looking for low-cost products.

The practical implementation of regulations and legislations across developed countries counter the counterfeiting practices to some extent. The market for anti-counterfeit packaging is segmented according to technology, application, and region. Development in nanotechnology increases the efficiency of packaged food product tracking. Thus, growth in authentication packaging reduces the counterfeiting activities in food and pharmaceutical products. Anti-counterfeit authentication technologies are classified into ink & dyes, holograms, and watermarks & taggants. Holograms, color shifting security inks & films, security graphics,

sequential product numbering, and on-product marking are some of the technologies used as anti-counterfeit solutions. However, watermarks and taggants are the covert technologies that require specialized identification tools. Covert technologies refer to hidden features on a packaged product, which are not accessible to the general public, but enable brand owners to detect counterfeited products. Examples of covert technologies include invisible printing, embedded images, hidden marks, and printing.
