The control tower is a central hub that has the necessary organization, processes, and technology to collect and utilize supply chain data to give decision-makers better insight for both immediate and long-term actions that are in line with strategic goals. A control tower aids the client in aligning and achieving strategic objectives by monitoring, measuring, and reporting, efficiency and service data in real-time. An IT system, processes, and human organization make up the control tower system. The staff can undertake analysis to improve judgments, spot a process failure, and better manage orders based on cycle durations with a control tower. Based on the feedback from this system, teams that watch over control towers can make better decisions. It offers improved visibility for both short- and long-term decisions that are in line with strategic goals.

The global control towers market is segmented on the basis of type, application, end-use, and region. By type, the market is sub-segmented into operational and analytical. By application, the market is sub-segmented into supply chain and transportation. By end-use, the market is classified into aerospace & defense, healthcare, retail & consumer goods, automotive & manufacturing, information & technology, and others. By region, the market is analyzed across North America, Europe, Asia-Pacific, and LAMEA.

By application industry, the supply chain sub-segment dominated the global control towers market share in 2021. A control tower is used in supply chain to collect necessary organization, processes, and technology and utilize supply chain data to provide better visibility for immediate and long-term decisions that are in line with strategic goals. The time between exceptions and resolutions is reduced due to control towers' visibility, which allows for exception detection in real time. The supply chain performance is improved and operational costs are decreased when exceptions are identified and resolved more quickly.

By type, the operational sub-segment dominated the market in 2021. This form of control tower is utilized for both analysis and action. Operational control towers are bigger systems with analytical capability. All supply chain trade partners conduct their daily supply chain execution operations through the control tower system. It aids in problem-solving, offers solutions in accordance with the nature of the issue, and offers visibility and control throughout the entire supply chain. As a result, the platform is enhanced with rich data that enables insightful analysis inside the supply chain control tower. These are predicted to be the major factors affecting the control towers market size during the forecast period too.

By region, North America dominated the global market in 2021. The control tower demand in countries, mainly in the U.S. and Canada, is growing rapidly as companies in this region are now focusing on increasing their supply chain efficiency. The North American companies now focusing more on using the value chain and data to generate business insights. Many manufacturers and retailers have noticed a rising need for a system that can track and analyze business-critical issues during the COVID-19 pandemic as a result of the trade conflict between China and the U.S. With this help, they can make quick decisions to improve their business insights, and to lessen their reliance on China, the companies in the region are concentrating more on strengthening their supply chain systems with the aid of supply chain control towers. These factors are anticipated to boost control towers market share in North America region.

The key players profiled in this report Blue Yonder Group, E2open, INFOR, KINAXIS, SAP SE, DiLX, o9 solutions, ORTEC, Viewlocity Technologies Pty Ltd, and One Network Enterprises.
