various factors such as the rise in genetic testing, increase in clinical trials, growth in the number of healthcare professionals, expansion of government programs, and rising demand for personalized treatments. This has encouraged the market to grow from \$XX million in 2024 to an impressive \$XX million in 2025.

What is the projected market size and CAGR of the [global Myozyme Market](#)?

The ever-expanding Myozyme market is poised to witness an impressive increase in the coming years. It is expected

to continue on the path of growth, preparing to expand to \$XX million by 2029 with a promising CAGR of XX%. This considerable growth in the forecast period can be linked to the rising prevalence of Pompe disease, heightened demand for enzyme replacement therapies, expansion of healthcare infrastructure, an increase in clinical trials, and heightened demand for home healthcare services. Forecasts propose that upcoming trends in this period would involve technological advancements, adoption of enzyme replacement therapies, personalized medicine, advancements in gene therapy, and innovations in cold-chain logistics.

What are the key factors driving the growth of the global Myozyme Market?

One primary motivator expected to drive the growth of the Myozyme market includes the increasing incidence of rare genetic disorders. These rare conditions result from gene mutations and affect just a minuscule segment of the population. Improvements in genetic testing, the advent of genetic mutations, and population growth have led to an increase in such genetic disorders. Myozyme plays a pivotal role in managing the symptoms of Pompe disease by replacing the deficient enzyme. Such treatment has proven to extend the lives of patients and significantly improved their quality of life. With more individuals being treated for Pompe disease, survival rates lengthen, and health outcomes improve. This enhances the demand for Myozyme in managing these disorders. For example, in December 2022, according to the US-based biomedical library, the National Library of Medicine, Gaucher Disease's birth prevalence was reported at 1.5 cases per 100,000 live births. Consequently, the increasing incidence of rare genetic disorders is projected to drive the growth of the Myozyme market in the future.
