What drives the privigen market?

An increase in the prevalence of immunodeficiency disorders is expected to significantly contribute to the accelerated growth of the privigen market. Immunodeficiency disorders, conditions that impair the immune system's ability to defend the body against infections and diseases, are on the rise. Factors such as increasing awareness coupled with improved diagnostic capabilities, longer survival rates of individuals with primary immunodeficiencies and the growing use of immunosuppressive therapies contribute to this increase. Privigen, an intravenous immunoglobulin IVIG, is utilized to treat these disorders by augmenting antibody levels, thus aiding patients in fighting off infections and maintaining effective immune system function.
