

Northside Plastic Surgery Sees Rising Demand for Menopause Makeovers

ALPHARETTA, GA, UNITED STATES, March 21, 2025 /EINPresswire.com/ -- Women experiencing the natural aging process of menopause are seeking innovative solutions to restore their youthful appearance. Menopause, which typically occurs in the late 40s, is associated with a significant decline in estrogen production. This hormonal shift leads to a loss of collagen, the protein responsible for maintaining skin's firmness and elasticity. As a result, skin becomes thinner, looser, and more prone to puffiness.

To combat these changes, many women are turning to Menopause Makeovers, a comprehensive approach that combines surgical and non-surgical procedures. These makeovers often include facelifts, [blepharoplasty](#) (eyelid surgery), Botox, and dermal fillers like Bellafill to restore volume and boost collagen production. These products are helping women reclaim their youthful appearance that in the past would require a lengthy and invasive procedure which comes with a long recovery time.

“

The goal is to help women feel confident and look refreshed without the need for extensive recovery periods.”

Dr. Mike Majmundar

“Advancements in cosmetic treatments allow us to offer patients more non-invasive options with minimal downtime,” says Dr. Mike Majmundar, a double board-certified facial plastic surgeon at Northside Plastic Surgery.

Northside Plastic Surgery has seen a steady increase in requests for Menopause Makeovers in recent years, reflecting the growing demand for personalized treatments that address the unique challenges of aging skin. In the past this would be met with long and invasive procedures that come with pain and lengthy recovery times. Now with cutting-edge techniques and a patient-centered approach, menopause no longer has to mean sacrificing a youthful

appearance.
