□Lingvist (Lingvist App, Lingvist Pro)

□Mondly (Mondly Language Learning App, Mondly VR (Virtual Reality Language Learning))

The online language learning market is growing rapidly due to globalization and the demand for multilingual skills. In the U.S., more than 15 percent of jobs relate to international trade, and nearly 10% require bilingual employees. Moreover, 20 percent of U.S. households report speaking a foreign language at home. In Europe, 95 percent of high school students have foreign language as part of the curriculum. And in Asia, more than 300 million Chinese are learning the English language with India expanding the multilingual study programs. More government support increases market growth at a global scale.

Segment Analysis

By Learning Mode

In 2023, self-learning apps and platforms emerged as the dominant segment in the online language learning market, capturing about 58% of the market share. The growth of self-learning apps can be attributed to the accessibility, affordability, and flexibility these platforms offer for learners. Even nowadays, many popular self-learning applications, such as Duolingo and Babbel, are extremely popular because of their interactive features and on-demand availability and gamified elements. As smartphones penetrate nearly all segments in developing economies and as high-speed internet access becomes more widely available, self-learning apps are becoming the first choice for most for learning a new language.

By Language Type

In 2023, English was the dominant language in the online language learning market, accounting for more than 55% of the market share. The prevalence of English as the global lingua franca in business, technology, science, and academia has played a prominent role in the lead generation for this language. Also, it has been due to government support for English language education in countries like South Korea and China that the need for English learning platforms has got accelerated. Demand for English in BPO sectors of a country like India and the Philippines has also driven up the expansion of this language segment.

Regional Analysis

In 2023, the Asia-Pacific region emerged as the dominant player in the online language learning market, capturing a significant market share of 38%. The growth in this region is primarily due to the increased government investment in the education sector and the rising middle-class population in countries like China, India, and Japan. Countries are focusing on developing English and other foreign language skills to enhance their global competitiveness.

Additionally, the growing internet penetration and smartphone usage across the region have made language learning more accessible to a wider audience, further fueling the market's expansion.

Recent Developments

- February 2024: The Ministry of Education of China entered into a strategic agreement with national EdTech companies to improve the quality of online language learning platforms. This initiative is aimed at providing remote and rural areas with better access to English education through digital opportunities.
- April 2024: The U.S. Department of Education launched the "Multilingual America" initiative,

which includes federal funding for the development of new language learning technologies. These AI-powered applications will support the growing demand for bilingual education in the U.S., further contributing to the market's growth.
