Key Takeaways from the Peripheral T-cell Lymphoma Pipeline Report

- In February 2025:- Seagen Inc.:- This clinical trial will study brentuximab vedotin with CHP to find out if the drugs work for people who have certain types of peripheral T-cell lymphoma (PTCL). It will also find out what side effects occur when brentuximab vedotin and CHP are used together. A side effect is anything the drugs do besides treating cancer. CHP is a type of chemotherapy that uses three drugs (cyclophosphamide, doxorubicin, and prednisone). CHP is approved by the FDA to treat certain types of PTCL.
- In January 2025:- Xenothera SAS:- This is a 2-part study consisting of a Part 1, dose escalation and dose-finding component to establish the Maximal Tolerated Dose (MTD), or Recommended Part 2 Dose (RP2D) of LIS1 as a single agent; followed by a Part 2, to investigate anti-tumors efficacy of LIS1 in selected subtypes of Peripheral TCell Lymphoma (PTCL) and to further evaluate

its safety and tolerability at RP2D.

- In January 2025:- Bristol-Myers Squibb:- The purpose of this study is to test the safety, tolerability, efficacy, and drug levels of BMS-986369 (Golcadomide) in participants with relapsed or refractory T-cell lymphomas in Japan (GOLSEEK-3).

Peripheral T-cell Lymphoma Emerging Drugs Profile

- HBI-8000: HUYA Bioscience International

The novel epigenetic drug, HBI-8000, is a member of the benzamide class of histone deacetylase inhibitors (HDACIs), working by controlling how tightly DNA is wound around histone proteins, which regulate gene expression. This alters the expression of several proteins involved in processes that arrest the growth of cancer cells, increase tumor immunity and change the tumor microenvironment. Evidence suggests that this mechanism increases the efficacy of other cancer agents such as checkpoint inhibitors.
