They have the capability to store and track all student information, including attendance records, grades, academic records, etc. It can be used by students, teachers, and parents to communicate about relevant information pertaining to a student's schooling as well as to gain access to student information, to make payments and communicate with school functionaries. This software also provides capabilities such as register students in courses, document results of student tests, grades, transcripts, and other assessment scores, build student schedules, track attendance, and manage many other student-related data.

Rise in focus of educational institutions toward improvement of education quality and to facilitate communication between students and faculty, parents and teachers, and within departments, and widespread government initiatives for technological advancements in the educational sector proliferates integration of various educational systems such as student management system, student information management system, and student records system. These are the major factors that boost the student information system market growth. However, lack of awareness among educational institutes regarding student information systems is a major factor that restrains growth of the student information system market.
