Cat Vaccine Global Market Report 2025 – Market Size, Trends, And Global Forecast 2025-2034

The radiant surge in the cat vaccine market size can no longer be overlooked. Long recognized for its vitality, the market is poised to grow from \$1.15 billion in 2024 to \$1.26 billion in 2025, reflecting a robust compound annual growth rate CAGR of 9.3%. The reason?

“

It will grow to \$1.78 billion in 2029 at a compound annual growth rate (CAGR) of 9.0%.

”

*The Business Research
Company*

An upsurge in the cat vaccine market is because of the emergence of new diseases in cats, the increasing prevalence of animal diseases, swelling livestock population, a burgeoning population of companion animals and a shocking rise in zoonotic diseases.

So, what can we anticipate from the cat vaccine market in the next few years?

The numbers offer a glimpse of an opportune future. The

market size is predicted to grow to \$1.78 billion by 2029, charting a compound annual growth rate CAGR of a sturdy 9.0%. This forecast period growth can be traced to several attributing factors, a rising trend of pet ownership, swelling disposable income, a growing appetite for veterinary services, robust initiatives by government and veterinary organizations, and a rapidly deepening awareness of animal health among people. Leading the charge in the forecast period are innovative trends such as development of advanced cat vaccines, innovative and more effective products, novel vaccine technologies, the crafting of combination vaccines, and the promising evolution of personalized vaccinations.

What's driving the market forward?

A bubbling prevalence of zoonotic diseases is the unsung hero here, propelling the growth of the cat vaccine market. Zoonotic diseases, for the unacquainted, are infections that hop from animals to humans, caused by pathogens such as bacteria, viruses, fungi, or parasites. These diseases can spread through direct contact, vectors, or contaminated environments. Some of the common zoonotic diseases include Lyme disease, rabies, toxoplasmosis, salmonellosis, brucellosis, among others. The rising tide of these diseases is due to climate change, antibiotic resistance, and illegal as well as legal wildlife trade. Cat vaccines play a key role in controlling zoonotic diseases, reducing the risk of transmission from cats to humans by immunizing cats against diseases such as toxoplasmosis and cat scratch fever.
