According to the anhydrous milk fat market analysis, the anhydrous milk fat market is segmented on the basis of nature, application, distribution channel, and region. By nature, the market is bifurcated into organic and conventional. Among these, the conventional segment occupied the major anhydrous milk fat market share in 2021 and is projected to maintain its dominance during the anhydrous milk fat market forecast period. Economic viability and a quick & simple manufacturing procedure compared to those of organic products are the main drivers propelling the conventional anhydrous milk fat market growth.

On the other hand, the organic segment is growing at the fastest rate in the market. The process of processing organic milk results in the by-product of organic anhydrous milk fat. Since it contains no water, it can be used in many food applications in place of regular anhydrous butter or margarine as it is waterless. The product is growing in popularity all over the world due to its high level of purity, which makes it perfect for use in many foods and beverages that need little water or are dry.

By application, the market is divided into the dairy, bakery, confectionery, and others. The dairy segment is expected to grow at a moderate rate during the forecast period. Along with bread and confectionery, dairy is the market's dominant application segment for anhydrous milk fat. In the dairy sector, anhydrous milk fat is widely used in the production of reconstituted milk and other dairy products such as whole milk, cheese, spreads, and ice cream.

By distribution channel, it is classified into online and offline. The offline segment is further fragmented into supermarkets/hypermarkets, specialty stores, convenience stores, and others. The online segment is anticipated to grow at the highest CAGR during the forecast period. Owing to the large availability of products and the provision of free home delivery, the online sales channel is one of the most advantageous distribution channels. The segment's expansion is also being fueled by the increased use of the internet in both developed and emerging countries.

The region that dominated the global anhydrous milk fat industry in 2021 was Asia-Pacific, and this dominance is anticipated to continue throughout the forecast period. The rise in consumption of dairy products, particularly in China and India, can be related to consumers' shifting food preferences and rise in disposable income levels.

The pandemic of COVID-19 had a significant negative influence on the market. Eventually, consumer buying patterns changed. Most consumers preferred natural and organic products over those manufactured with chemicals since they were so concerned about their health and adhered to a healthy diet to prevent virus attacks. Owing to the strength and anti-microbial

properties of milk products, people continued to consume them. The market also profited from the uncertainty brought on by fiscal 2021 as a result of the increased demand for anhydrous milk fat.

KEY FINDINGS OF STUDY

By nature, the conventional segment was the highest revenue contributor to the market, and is estimated to grow with a CAGR of 7.0%.

By application, the dairy segment was the highest revenue contributor to the market, in 2021, and is estimated to grow with a CAGR of 6.8%.

Depending on the distribution channel, the offline segment was the highest revenue contributor to the market in 2021, and is estimated to grow with a CAGR of 7.0%.

Region-wise, the Pacific region was the highest revenue contributor and is estimated to grow with a CAGR of 6.7%.
