A recent study published in the British Dental Journal highlights that Invisalign treatment has an 80% success rate in achieving desired tooth movements, positioning it as a reliable alternative to metal braces.

Dr. Krystal Tarak, lead Invisalign dentist at All Smiles Dental, explains: "We offer Invisalign treatment as a comfortable and convenient solution for patients who want an effective way to straighten their teeth while maintaining their everyday lifestyle. The aligners are nearly invisible, removable, and provide outstanding results."

Unlike conventional braces, Invisalign treatment uses a series of custom-fitted clear braces that gradually shift teeth into the correct position. Patients receive a new set of orthodontic aligners approximately every two weeks, with treatment duration varying depending on individual needs.

As a premier provider of Invisalign Auckland services, All Smiles Dental offers tailored treatment

plans for cases ranging from mild misalignment to more complex bite corrections. The practice also provides alternative orthodontic solutions, including Fastbraces, Myobrace, Growth Guidance Orthodontics, and conventional braces.

Patient reviews highlight the positive experience at All Smiles Dental. Nadia V. shares, "So glad I got my Invisalign braces done with All Smiles! The team made me feel welcome and at ease. Super happy with the results."
