

Mango Animate Launches an Avatar Video Maker for Users to Create Videos

Mango Animate brings an innovative solution for content creators, helping them enhance audience engagement.

HONG KONG, HONG KONG, CHINA, February 21, 2025 /EINPresswire.com/ -- Engaging the audience is important for video creators who constantly require innovative methods to attract views and retain an audience while gathering more followers. Mango Animate, a professional animation solution provider, meets their demand by rolling out a versatile and easy-to-use AI [avatar video maker](#) named Mango AI. With this tool, users can create realistic avatar videos from plain text and images, adding a new layer to audience engagement.

Mango AI shows various AI avatars, catering to various needs.

Mango AI's robust text-to-animation feature converts users' video scripts into interactive AI avatar videos. Compared to the traditional video creation process that involves scripting, filming, and editing videos, AI video production does not require much time and effort. The AI-driven avatar video maker streamlines users' workflow and levels up their video content effectively. It is an efficient solution to create appealing videos that inform, educate, and engage the audience.

“

Our avatar video maker is not just a free online tool that allows our users to create interactive videos. It is a versatile solution that brings ideas to life and takes content to the next level.”

Winston Zhang, CEO of Mango Animate

The online AI video generator removes the hassle of downloading software and saves storage space on users' devices. Users can access its tools across various devices, like desktop computers, tablets, and smartphones.

Designed with user-friendliness in mind, Mango AI's simple user interface allows everyone to navigate the platform smoothly. Its accessibility ensures users, including beginners as well as

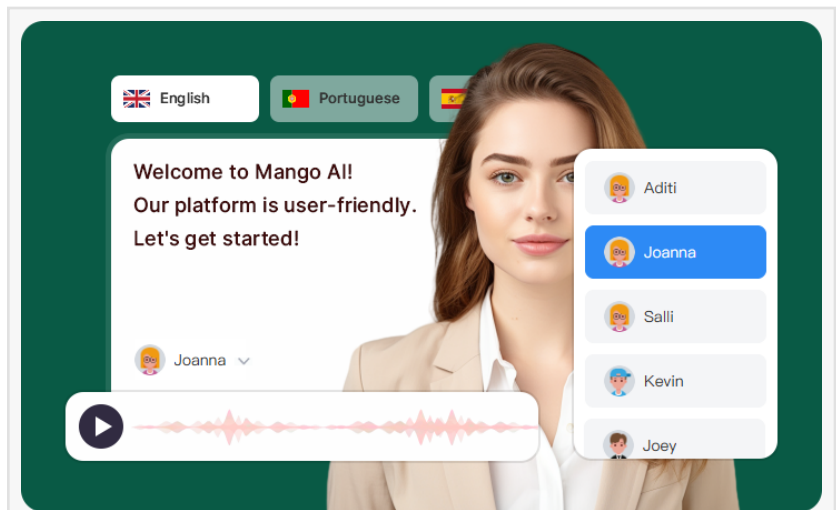

professionals, get the hang of the avatar video maker quickly and have an enjoyable user experience.

One of the highlight features of Mango AI is its massive library of human-like [AI avatars](#) that act as interactive presenters in videos. They cover different ages, ethnicities, professions, and attires. Users will find an avatar that fits their content and different scenarios. The AI avatars within the platform are continuously evolving in terms of realism and number. In addition, users have the flexibility to adjust the facial expressions of these AI avatars to make them look more natural and lifelike. Mango AI's pre-built digital avatars are useful for video creators when they don't want to show themselves due to privacy concerns or are shy about appearing in front of the camera.

Besides, the AI avatar video maker enables users to create a custom avatar. What users need to do is upload a static portrait photo. Mango AI will turn it into a unique AI avatar that mirrors one's physical appearance. The custom avatar brings a touch of personalization into users' videos, capturing the attention of the audience effectively. This approach is helpful for those looking to improve brand recognition in videos, driving audience engagement with their brands.

The diversification of AI voices makes Mango AI a powerful tool too. The platform provides users with a wide collection of studio-quality voiceovers, covering both male and female voices. There are a variety of AI voices across multiple languages and accents available to choose from, such as Arabic, Chinese, French, and Spanish, helping users localize video content and reach out to the global audience. The vast options enable users to select a suitable voice for their avatars and content, making videos more relatable to the audience. The voiceover library of the avatar video maker opens a window of versatility and personalization that enhances users' visual storytelling. Besides, Mango AI lip-syncs these voices to the avatars, elevating the realism of digital avatars and the quality of the final results.

The AI video generator's template library supports users in creating appealing avatar videos

The avatar video maker offers various AI voices.

Mango Animate launches an AI animation generator to make video more engaging.

quickly. These professionally designed templates meet any type of content whether users want to create instructional tutorials, product presentations, or marketing videos. They feature smooth animation effects and transitions, making video creation a breeze for those without video editing skills.

The versatility of Mango AI makes it a good fit for users to produce high-quality videos. Companies can introduce their products or services through AI avatar videos to create a connection of trust and increase brand loyalty, making lead generation easier. HR teams may need to create employee training videos to educate the staff on company policies and improve their skill development. The AI avatar video maker comes into play by empowering them to produce captivating training videos simply from text.

In addition to avatar video generation, Mango AI has developed other advanced tools for video creation. Its [live portrait AI](#) tool supports users in transforming static portraits into animated videos. It replicates the head movements and facial expressions from a video into a portrait photo, making one's images come alive. Users can also create face-swap videos, translate videos, upscale videos, and cartoonize videos on the platform.

“Our avatar video maker is not just a user-friendly tool that allows our users to create interactive videos. It is a versatile solution that brings their ideas to life and takes their content to the next level,” said Winston Zhang, CEO of Mango Animate.
