Veterinary Intravenous (IV) Solutions Global Market
Report 2025 – Market Size, Trends, And Global
Forecast 2025-2034

What Is the Anticipated Growth Rate and Market Size of the Global Veterinary Intravenous IV Solutions Market?

The [veterinary intravenous IV solutions market](#) has experienced significant growth in recent years, increasing from \$1.5 billion in 2024 to an anticipated \$1.62 billion in 2025, reflecting a compound annual growth rate CAGR of 8.1%. This substantial growth during the historical period can be attributed to the increasing number of veterinary clinics, the rise in incidence of dehydration among animals, expansion in livestock farming, growth in the number of companion animals, and advancements in veterinary diagnostics.

The market is expected to continue its robust growth in the coming years, projected to reach \$2.19 billion in 2029, with a CAGR of 7.8%. Major trends contributing to this positive forecast include technological advancements, diversified product formulations, telemedicine integration, the introduction of advanced veterinary IV delivery systems, and the trending usage of smart veterinary IV systems.

What Are the Key Growth Drivers and Trends in the Veterinary IV Solutions Market?

The increase in the prevalence of various animal diseases is expected to propel the growth of the veterinary intravenous IV solutions market. Conditions which impair the health and function of

animals, such as anthrax, leptospirosis, rabies, canine distemper, heartworm disease, and more are driving the need for these essential solutions, especially for rehydrating animals affected by dehydration-inducing diseases like gastroenteritis or severe infections.

Further boosting the veterinary IV solutions market is the sizable increase in spending on animal health products. The expenditure on these products, like medications, supplements, and treatment options which maintain or improve animals' health and well-being, is escalating due to the rise in pet ownership, growing awareness of animal health, advancements in veterinary care, and the necessity for better disease prevention and treatment options.
