

# Secria Launches Next-Generation Email Platform with Post-Quantum Encryption

*With post-quantum encryption, tracker blocking, and one-click secure email aliases, Secria is redefining privacy to protect user data from exploitation.*

DE, UNITED STATES, February 20, 2025 /EINPresswire.com/ -- Secria announces the launch of a new privacy-focused email service designed to block hidden tracking, protect sensitive communications with post-quantum encryption, and offer one-click secure email aliases. This announcement addresses growing concerns over surveillance, targeted advertising, and unauthorized data collection in mainstream email platforms.

## Common Vulnerabilities in Mainstream Email

Many existing email services rely on data monetization strategies that involve scanning messages, enabling pixel tracking, and harvesting user metadata. These practices can allow advertisers, corporations, and even surveillance agencies to analyze online behavior and collect sensitive information.

## Key Features

Secria is built to minimize data exploitation by implementing the following features:

- Post-Quantum Encryption: Employs future-proof encryption to protect against emerging cybersecurity threats.
- Tracker Blocking: Stops hidden tracking pixels from revealing user activity.
- Secure Email Aliases: Offers one-click alias rotation to safeguard private addresses.

Most major cyberattacks starts with an email. It's time for a better solution. Secria isn't just another email provider, it's a fundamental shift in how email security should work."

*Adrian Maverick, Co-Founder  
& CEO of Secria*

-Self-Destructing Emails: Allows time-sensitive messages to delete automatically after a specified interval.

-Minimal Data Collection: Retains only essential information required for service functionality.

-User Verification System: Reduces impersonation risks by requiring sender verification.

#### Early Access and Future Plans

Secria is launching with a waiting list, granting invitations in batches to manage platform growth and maintain service

quality. Although currently available for individual users, Secria plans to roll out business-focused solutions in the near future.

#### Privacy-First Philosophy

A core principle of Secria is strict adherence to privacy by default. Unlike advertising-driven providers, this new service does not monetize user data and does not rely on ad-based revenue models. Advanced security features are enabled from the start, eliminating the need for complicated setup or additional software.

#### Availability

Secria is expected to move from waitlist access to broader availability in early March 2025. Additional information, including sign-up details, can be found on the official website at [secria.me](https://secria.me).

For more information or press inquiries, visit Secria's website at [secria.me](https://secria.me) or email [hq@secria.me](mailto:hq@secria.me).
